

To: AC Extest Working Group

Agilent Technologies is working with other companies to develop a test standard for boundary scan testing of AC coupled logic. Agilent's objective is to promote this standard and has no desire to encumber the standard in any way. This is consistent with Agilent's practice, evidenced by our support and actions regarding the 1149.1, 1149.4 and 1532 standards.

Agilent may hold one or more patents, and is also pursuing one or more patents which may be applicable to the standard.

Agilent will grant a nonexclusive, reciprocal license on reasonable terms and conditions to any Agilent patent claim necessary to implement the standard on a nondiscriminatory basis for the purpose of implementing the standard.
