

IEEE P1901 Approved general workflow

IEEE P1901 down selection process performed on each cluster of requirements

Voluntary mergers, elimination votes, and technical improvements are conducted until there remains only one surviving candidate proposal on a cluster.

The Working Group then conducts a first 75% confirmation vote on the cluster. If the surviving proposal passes the confirmation vote, it becomes a part of the baseline of the standard.

If the proposal fails the first confirmation vote, the working group attempts to resolve the issues related to the opposition and conducts a second 75% confirmation vote.

If the second confirmation vote fails, the selection process on the cluster is reset and three proposals are brought back for consideration.
