

CPRI mappers

Jouni Korhonen
October 18, 2015

Background

- ❑ We have a working assumption to define two CPRI mappers:
 - Structure agnostic mapper (called in the D0.1 as CPRI01).
 - Structure aware mapper (called in the D0.1 as CPRI11).
- ❑ Mappers are also associated with a “format defining language” that are either RoE native or mapper specific.
- ❑ The principles of the proposed mappers and other functionality already presented during biweekly calls.

Proposal

- Approve both mapper proposals as the baselines.
- There is some editorial clean up to do.

Discussion

- Proposed next steps:
 - Approve the principle.
 - Changes to D0.1 shown in the associated Word document (tf3_1510_korhonen_cprimapper-word_1.docx).
