

The ISO 17799 Service & Software Directory

ISO 17799 is an extremely comprehensive and detailed standard. Compliance, therefore, will require both a methodical and measured approach. It will also require commitment, as well as access to appropriate tools and products.

The *ISO 17799 Service & Software Directory* is intended to assist any organization seeking to improve its compliance position with respect to the standard... perhaps as a prelude to full certification. As well as information on the standard itself, it provides direct links to tools and products designed to make the process easier... including [downloadable](#) trial versions.

Whether you are entirely new to ISO 17799, or whether you are well on the path to compliance/certification, the directory should hopefully prove to be of significant value.
