## Introduction

- In session 56 there were open discussions related to the benefits of having 4 switching points as an option within the frame structure.
- In particular contribution C802.16m-08/669 was discussed which included some basic latency analysis along with an evaluation of throughput obtained from system level simulations.
- The authors proposal at the time was to remove 4 switching points as they claimed the performance gain, when compared to the 2 switching point case, was negligible.
- Taking C802.16m-08/669 as a starting point, we have investigated varying $\mathrm{BS} / \mathrm{MS}$ processing times and the impact this can have on data latency for both the 2 and 4 switching point cases
- This contribution therefore demonstrates the latency reduction gains of having 4 switching points when considering different $\mathrm{BS} / \mathrm{MS}$ processing times

## Downlink Latency - 2vs4 Switching Points

2 switching points

4 switching points

Note, for illustration purposes $T_{p}=2$ subframes where $T_{p}$ is $B S / M S$ processing time

## DL Data Latency with $T_{p}=4$ subframes (worst case)

| Packet arrival (Subframe) | Total Latency with 1 ReTx (ms) |  | Delay with 30 \% ReTx (ms) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 2 SP | 4 SP | 2 SP | 4 SP |
| 0 | 17.6 | 13.27 | 10.68 | 8.08 |
| 1 | 17.0 | 14.50 | 10.06 | 9.32 |
| 2 | 16.4 | 13.89 | 9.44 | 8.70 |
| 3 | 15.7 | 13.27 | 8.83 | 8.08 |
| 4 | 15.7 | 13.27 | 8.83 | 8.08 |
| 5 | 15.7 | 14.50 | 8.83 | 9.32 |
| 6 | 15.7 | 13.89 | 8.83 | 8.70 |
| 7 | 18.2 | 13.27 | 11.29 | 8.08 |
| Average | 16.51 | 13.73 | 9.60 | 8.55 |

4 SP Gain (\%) 10.93
16.82

## DL Latency with $\mathrm{T}_{\mathrm{p}}=2$ subframes

| Packet arrival (Subframe) | Total Latency with 1 ReTx (ms) |  | Delay with 30 \% ReTx (ms) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 2 SP | 4 SP | 2 SP | 4 SP |
| 0 | 8.33 | 8.95 | 4.88 | 5.49 |
| 1 | 10.80 | 8.33 | 7.34 | 4.88 |
| 2 | 10.18 | 8.33 | 6.73 | 4.88 |
| 3 | 9.57 | 9.57 | 6.11 | 6.11 |
| 4 | 8.95 | 8.95 | 5.49 | 5.49 |
| 5 | 8.33 | 8.33 | 4.88 | 4.88 |
| 6 | 8.33 | 8.33 | 4.88 | 4.88 |
| 7 | 8.33 | 9.57 | 4.88 | 6.11 |
| Average | 9.10 | 8.79 | 5.65 | 5.34 |
|  |  |  | 4 SP Gain (\%) |  |
| Delay with 30 \% ReTx (ms) |  |  | 5.46 |  |
| Total Latency with 1 ReTx (ms) |  |  | 3.39 |  |

Data Latency with $30 \% \operatorname{ReTx}(\mathrm{Tp}=2 \mathrm{TTI})$

Total Latency with $1 *$ ReTx ( $\mathrm{Tp}=2 \mathrm{TTI}$ )

## DL Latency with $\mathrm{T}_{\mathrm{p}}=\mathbf{2}$ subframes (1 subframe for NACK)

|  | Total Latency with $\mathbf{1}$ <br> ReTx (ms) |  | Delay with $\mathbf{3 0} \%$ <br> ReTx $(\mathbf{m s})$ |  |
| :---: | :---: | :---: | :---: | :---: |
| Packet arrival <br> (Subframe) | $\mathbf{2} \mathbf{S P}$ | $\mathbf{4} \mathbf{S P}$ | $\mathbf{2 ~ S P}$ | $\mathbf{4} \mathbf{~ S P}$ |
| $\mathbf{0}$ | 8.3 | 9.57 | 4.88 | 5.68 |
| $\mathbf{1}$ | 10.8 | 8.95 | 7.34 | 5.06 |
| $\mathbf{2}$ | 10.2 | 8.33 | 6.73 | 4.88 |
| $\mathbf{3}$ | 9.6 | 10.18 | 6.11 | 6.30 |
| $\mathbf{4}$ | 8.9 | 9.57 | 5.49 | 5.68 |
| $\mathbf{5}$ | 8.3 | 8.95 | 4.88 | 5.06 |
| $\mathbf{6}$ | 8.3 | 8.33 | 4.88 | 4.88 |
| $\mathbf{7}$ | 8.3 | 10.18 | 4.88 | 6.30 |
| Average | 9.10 | 9.26 | 5.65 | 5.48 |

Data Latency with 30\% ReTx (Tp = 2 TTI with 1 TTI for NACK)

Total Latency with $1 * \operatorname{ReTx}$ ( $\mathrm{Tp}=2 \mathrm{TTI}$ with 1 TTI for INACK)

## DL Latency with $T_{p}=1$ subframe

| Packet arrival (Subframe) | Total Latency with 1 ReTx (ms) |  | Delay with 30 \% ReTx (ms) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 2 SP | 4 SP | 2 SP | 4 SP |
| 0 | 7.1 | 5.86 | 3.64 | 4.13 |
| 1 | 7.1 | 5.25 | 3.64 | 3.52 |
| 2 | 9.6 | 4.63 | 6.11 | 2.90 |
| 3 | 8.9 | 4.63 | 5.49 | 2.90 |
| 4 | 8.3 | 5.86 | 4.88 | 4.13 |
| 5 | 7.7 | 5.25 | 4.26 | 3.52 |
| 6 | 7.1 | 4.63 | 3.64 | 2.90 |
| 7 | 7.1 | 4.63 | 3.64 | 2.90 |
| Average | 7.87 | 5.09 | 4.41 | 3.36 |
|  |  |  | 4 SP Gain (\%) |  |
| Delay with 30 \% ReTx (ms) |  |  | $23.78$ |  |
| Total Latency with 1 ReTx (ms) |  |  | 35.29 |  |

Data Latency with $30 \% \operatorname{ReTx}(\mathrm{Tp}=1 \mathrm{TTI})$

Total Latency with $1 * \operatorname{ReTx}(\mathrm{Tp}=1 \mathrm{TTI})$

[^0]
## Uplink Latency - 2vs4 Switching Points

Note, for illustration purposes $T_{p}=2$ subframes where $T_{p}$ is $B S / M S$ processing time 8

## UL Latency with $\mathrm{T}_{\mathrm{p}}=2$ subframes

| Packet arrival (Subframe) | $\begin{aligned} & \text { Total Latency with } 1 \\ & \text { ReTx (ms) } \end{aligned}$ |  | Delay with 30 \% ReTx (ms) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 2 SP | 4 SP | 2 SP | 4 SP |
| 0 | 13.89 | 13.27 | 10.43 | 9.81 |
| 1 | 13.27 | 14.50 | 9.81 | 11.05 |
| 2 | 12.65 | 13.89 | 9.20 | 10.43 |
| 3 | 12.03 | 13.27 | 8.58 | 9.81 |
| 4 | 11.42 | 13.27 | 8.39 | 9.81 |
| 5 | 15.74 | 14.50 | 12.28 | 11.05 |
| 6 | 15.12 | 13.89 | 11.66 | 10.43 |
| 7 | 14.50 | 13.27 | 11.05 | 9.81 |
| Average | 13.58 | 13.73 | 10.18 | 10.28 |

4 SP Gain (\%)

| Delay with $30 \% \operatorname{ReTx}(\mathrm{~ms})$ | -0.986 (loss) |
| :---: | :---: |
| Total Latency with 1 ReTx $(\mathrm{ms})$ | -1.136 (loss) |

Data Latency with 30\% ReTx (Tp = 2 TTI )

Total Latency with 1*ReTx (Tp = 2 TTI$)$

-2 switching points $\longrightarrow-4$ switching points

## UL Latency with $T_{p}=1$ subframe

| Packet arrival (Subframe) | Total Latency with 1 ReTx (ms) |  | Delay with 30 \% ReTx (ms) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 2 SP | 4 SP | 2 SP | 4 SP |
| 0 | 13.27 | 7.10 | 9.81 | 5.37 |
| 1 | 12.65 | 7.10 | 9.20 | 5.37 |
| 2 | 12.03 | 8.33 | 8.58 | 6.60 |
| 3 | 11.42 | 7.71 | 7.96 | 5.99 |
| 4 | 10.80 | 7.10 | 7.34 | 5.37 |
| 5 | 10.18 | 7.10 | 6.73 | 5.37 |
| 6 | 14.50 | 8.33 | 11.05 | 6.60 |
| 7 | 13.89 | 7.71 | 10.43 | 5.99 |
| Average | 12.34 | 7.56 | 8.89 | 5.83 |

## 4 SP Gain (\%)

Delay with 30 \% ReTx (ms) 34.38

Total Latency with 1 ReTx (ms)
38.75

## Latency - Summary and Conclusion

|  | Downlink Gain (\%) |  | Uplink Gain (\%) |  |
| :---: | :---: | :---: | :---: | :---: |
| Processing time Tp (subframes) | Total Latency with 1 ReTx | Delay with 30\% ReTx | Total Latency with 1 ReTx | Delay with 30\% ReTx |
| 1 | 35.29 | 23.78 | 38.75 | 34.38 |
| 2 | 3.39 | 5.46 | -1.136 | -0.986 |
| 2 with 1 for NACK | -1.69 | 3.01 | - | - |
| 4 | 16.82 | 10.93 | - | - |

- With a range of different processing times, it is clear that the having 4 switching points can further improve latency, especially in the case where the BS and MS processing time is 1 subframe.
- We should not limit the IEEE 802.16 m standard by current implementations (i.e., processing speed) and be sure that the AAIF is 'future-proof'

## Throughput Analysis

Assumptions:

- Simulation conditions based on 16 m EMD (004r3)
- MS and BS processing is 1 subframe
- Pilot CQI measurement
- 2 Switching point DL:UL ratio - 4:4
- 4 Switching point DL:UL ratio - 2:2
- No signalling overhead assumed

## Case 1 - Throughput analysis

5ms Radio Frame

Note, the 4 switching point frame structure has one less symbol as to

## Case 2 - Throughput analysis

5ms Radio Frame

|  |  |
| :---: | :---: |
| Channel | 4 SP Gain (\%) |
| PB3 | 0.3 |
| VA30 | 20.7 |
| VA120 | 11.6 |
| Mixed | 6.1 |

[^1]Note, both frames have same number of OFDMA symbols

## Conclusion \& Recommendation

- Unlike C802.16m-09/669 we have shown that latency is very sensitive to varying BS/MS processing times
- When $\mathrm{BS} / \mathrm{MS}$ processing time is equal to 1 subframe, the 4 switching point frame can provide $20-40 \%$ gain in latency
- Having evaluated the throughput results obtained from system level simulations it is clear having 4 switching points does not degrade system throughput even when an extra symbol is sacrificed for an additional TTG
- It is therefore clear, that the optional 4 switching point frame should remain as to ensure that 802.16 m can take advantage of rapid advances in processing technology

[^0]:    -2 switching points $\rightarrow 4$ switching points

[^1]:    $\square 4$ Switching Points $\square 2$ Switching Points
