

BWA Ad Hoc output document structure

Pete Anslow, Ciena

IEEE BWA Ad Hoc, Singapore, March 2011

What will the Ad Hoc output be?

The most appropriate format for the Ad Hoc output document seems to be as one or more White Papers intended to be “liaison letters to the world”.

Is there any disagreement with this?

Should this be a single White Paper covering the future bandwidth needs of all Ethernet wireline applications, or would it be better to create separate White Papers for each application area?

A single White Paper with separate sections covering the different application areas seems to be the best approach:

- a single reference points to the whole document;
- individual application areas can reference the appropriate section.

Thanks!
