## Link characteristic TBDs

| Parameter | Unit | Name | Proposed Formula | Proposed |
| :---: | :---: | :---: | :---: | :---: |

| Operating Range | m |  | link model output | TBD (110) note 1 |
| Channel insertion loss | dB |  | link model output | $\operatorname{TBD}(1.9)^{\text {note } 1}$ |

- Note 1: the values in brackets are updates from petrilla_03_1112, but are 'unapproved ' by the MMF ad hoc.
- Note 2: the power budget should be min Tx OMA at max TDP minus the unstressed receiver sensitivity at $5 \times 10^{-5}$

## Back up

## Tx average power, ER, OMA

- A max OMA of +3 dBm gives reasonable range of Tx OMA for max TDP
- Corresponds to $\mathrm{ER}=5.6 \mathrm{~dB}$ at average power of +2.4 dBm
- Add the ' 1 level correction' to the average power to calculate the optical 1 level
- Typically, VCSELs ER is set in the range of 4 dB to 7 dB range; for a max average power spec at +2.4 dBm , and max OMA of 3 dBm , the max 1 level power is +4.4 dBm
