Make optional support of fast retrain the norm. Reasoning:
-IF FR were a mandatory capability, you would logically disable it when it is undesired. there is a management "fr_enable" bit - the enable bit, right now, effects only one side and, as the note says, causes the link drop if the partner initiates a fast retrain.
-One would like the ability to disable FR on a link basis, getting both sides to agree not to try FRs. The advertisement in autoneg of FR support is the currently defined way to do this. Therefore, in order to set a link most conveniently and reliably not to FR, you want to not advertise support for it in autoneg.
This is equivalent from an interoperability standpoint of working with PHYs that do or do not support autoneg.
The easiest solution is to leave FR as it is, and perhaps add a note that implementation of FR is recommended, and using the 'FR supported' bit in autoneg is the recommended method for disabling it. [TECH-INF]

SuggestedRemedy

Delete Editor's note
Accept text "40GBASE-T PHYs may optionally support a fast retrain mechanism."
Insert sentence following this stating "Implementation of the fast retrain option is recommended. Configurations wishing to disable fast retrain on the link may do so by advertising lack of support in Clause 28 AutoNegotiation, thus preventing the link partner from attempting fast retrain and potentially dropping the link."

Belopolsky, Yakov   Bel Stewart

Comment Type **T**   *Comment Status* **D**   *Class I/Class II*

The sub-clause states "40GbBASE-T is designed to operate over ISO/IEC 11801 Class 1 4-pair balanced cabling that meets the additional requires specified in this sub-clause"
The sub-clause 113.7.1 lines 52 and 53 says "Operation on other classes of cabling may be supported if the link segment meets the requirements of 113.7"
These two statements need to be combined in the 113.7 (and the second statement removed from 113.7.1)

SuggestedRemedy

Include in 113.7 40GbBASE-T is designed to operate over ISO/IEC 11801 Class 1 4-pair balanced cabling that meets the additional requires specified in this sub-clause. Operation on other classes of cabling may be supported if the link segment meets the requirements of this sublcause"

Proposed Response   *Response Status* **Z**

REJECT.

This comment was WITHDRAWN by the commenter.

The suggested text is essentially given in 113.7.1 which addresses cabling system characteristics.

113.7.1 Cabling system characteristics
The cabling system used to support 40GBASE-T requires 4 pairs of ISO/IEC 11801 Class I balanced cabling
with a nominal impedance of 100 ohms. Operation on other classes of cabling may be supported if the link
segment meets the requirements of 113.7.

In the clause 'Noise environment' there is under f) line 41 a good explanation on alien noise. But the reference to clause 113.7.3 assumes that the disturbing channels all carry the same signals e.g. 40GBAST-T. As other protocols may have higher transmitting power this should be mentioned here.

SuggestedRemedy

Add at the end of f):
This assumes the realistic case of all disturbers carrying the same signals. If different see remedies in ISO/IEC TR 11801-9901.

Proposed Response   *Response Status* **Z**

REJECT.

This comment was WITHDRAWN by the commenter.

The commented text does not reference what signals may be carried by disturbers. The reference to 113.7.3 speaks to the transfer function seen by ANY alien crosstalk disturbers.

Belopolsky, Yakov   Bel Stewart

Comment Type **TR**   *Comment Status* **R**   *MDI*

40GBASE-T is intended to operate over the cabling that meets the requirements of the ISO/IEC 111801 standard that includes Class I and Class II channels and in fact recognizes that components of categories 6a and 7a or better can support such transmission.
The IEC 60603-7-81 is not published, very limited technical data is available for such connectors   Connectors with mechanical interface specified in the IEC61076-3-110 have a better balance (no-split pair issues) and support more robust channel transmission performance. Numerous presentations were given to IEEE illustrating the superior transmission performance. The reliance on the only one connector type will result in the limited deployment of the 40GBASE-T technology
Figures 113-40 & 113-41: The informational figures 113-40 and 113-41 are misleading.

SuggestedRemedy

Remove pictures 113-40 and 113-41
Line 6 remove the sentence starting with "These connectors are depicted…."

Line 4 add   "Eight -pin connectors meeting the requirements of IEC 61076-3-110 (published) shall be used as an alternative mechanical interface to the balanced cabling"

Response   *Response Status* **C**

REJECT. See response comment#182.

Cl **113**   *SC* **113.8.2.2**   *P* **183**   *L* **1854**   # 173

Lackner, Hans   QoSCom GmbH

Comment Type **T**   *Comment Status* **D**   *MDI*

As some values of the channels specified can only be made if shields are used, the MDI connection has to be also a shielded design. When using shields the symmetry mechanisms are different. The values in Formula 113-54 are by far too high.
Additionally the good explanation on how to measure this does not belong into the main body of this standard.

SuggestedRemedy

Change in Formula 113-54
48 to 40 and
44to 35,7
Add to editors note in line 33 that lines 38-54 will be removed prior to publication.

Proposed Response   *Response Status* **Z**

REJECT.

This comment was WITHDRAWN by the commenter.

The text regarding the measurment of MDI balance is typically included in 802.3 BASE-T standards, and was cleaned up during comment resolution at the January meeting.

In practical multi-speed systems, MDI balance will need to be met under 500MHz for unshielded cabling if 1000 & 10GBASE-T operation is to be supported. Shielded MDIs exist for these systems.

Technical contributions on the impact of the balance specification are welcomed, but have not been presented.
