E-MAIL:                 hbarrass@cisco.com                                    8
                                                                              9
REQUESTED REVISION:                                                          10
    STANDARD:           802.3-2012                                           11
    CLAUSE NUMBER:      49                                                   12
    CLAUSE TITLE:       Physical Coding Sublayer (PCS) for 64B/66B, type     13
10GBASE-R                                                                    14
PROPOSED REVISION TEXT:                                                      15
                                                                            16
Subclause 49.2.13.3.1, change Figure 49-13                                  17
                                                                            18

                                                                            20
To R_TYPE(rx_coded) = C                                                     21
                                                                            22
(2 instances)                                                               23
                                                                            24
                                                                            25
RATIONALE FOR REVISION:                                                     26
                                                                            27
There is no defined constant called IDLE in this clause, nor is it a        28
defined value for R_BLOCK_TYPE. It is clear that the intent is to refer     29
to R_BLOCK_TYPE that is C (idle or control characters other than /E/ or /   30
LI/).                                                                       31
                                                                            32
IMPACT ON EXISTING NETWORKS:                                                33
                                                                            34
None. Any user that is familiar with the standard would infer the obvious   35
meaning from the undefined term 'IDLE.'                                     36
                                                                            37
