

P1232 Ad Hoc Working Group

March 26, 2007

Attendees:

- Darryl Busch
- Brit Frank
- Alicia Helton
- John Sheppard
- Tim Wilmering

Discussion began by considering the need for a PAR extension. It is likely one will be needed, so we will go ahead and request one at the April meeting.

On the definitions, we still need to consider the DIM/EDIM consolidation as well as consider possible modifications to the Bayes model.

Brit volunteered to serve as QA.

Must haves for ballot:

- Services
- Model definitions
- DIM/EDIM Consolidation
- XML Schema
- Conformance

Discussion continued on the definitions. The focus of the discussion was the fault tree model. We left off with testResult as the only remaining entity in the model. Constraint rules also need to be edited.

Alicia and Michelle will be working on a plan of action to complete the standard.

The next meeting will be Monday, April 2, same time.
