

**Minutes**  
**Working Group on Switching and Overcurrent Protection**  
**July 17, 2001**

The Working Group on Switching and Overcurrent Protection met concurrent with its two Task Forces from 8:00 AM to 11:00 AM on Tuesday, July 17, 2001.

The Task Force on Distribution Networks continued its work on the Network Tutorial. There is now a private page on the Working Group's new web site where the most recent versions of Chapters 1-3, 5-10, 12 and 15 are posted, as well as Appendices 3 and 5. Tom Kulas volunteered to modify the Introduction and the Summary based upon our discussions. Charles Fijnvdrat will do the same for the chapter on Network Transformers. Chapters 13 and 14 need to be written.

The Task Force on faulted Circuit Indicators reported that the Single Phase Guide has been published. The Task Force reviewed Draft 1 of the Three-Phase Guide and decided that its title will be "Application of Faulted Circuit Indicators for 200/600A, Three-Phase Underground Distribution". John Banting is completing the PAR submittal and will establish a private page for this Task Force on the Working Group's IEEE web site. We reviewed Sections 1-4 of Draft 1, and made some revisions and writing assignments. All Task Force members will review Sections 5-7 before the next meeting. We will contact the ICC so they will have opportunities to participate in the development of the Three-Phase Guide. The Working Group will also be working concurrently on updating IEEE 495.
