

1450.4 meeting minutes – 04/01/11

Attendees: Ernie Wahl, Paul Reuter

Not present: Oleg Erlich, Jim O'Reilly, Ajay Khoche, Markus Seuring

Agenda:

- IEEE Meeting Preamble (No discussion of proprietary information).
- Continue work on section 7.6 "Variables and Expressions".

Summary:

- Recommended support of the following mathematical functions:
 - `eval(mx)`
Evaluates mathematical expression argument inline and returns a single literal value or an array of literal values if `mx` represents an array.
 - `min|max(mx,mx...)`
Returns a single literal minimum/maximum value from mathematical expression variable-length argument list. Includes array elements in comparison if one or more arguments represent an array. All arguments shall have matching units.

NOTE: argument list is not defined in STIL.0. or STIL.1. If Flow extension appears in the header, then STIL.0 and/or STIL.1 parsers shall use this definition.
- Group to consider supporting `sin(mx)`, `cos(mx)`, `tan(mx)`, `abs(mx)`, other ? What do mixed signal testers support ?
NOTE: `mx` is mathematical expression
- Near line 1645 added eval example:
`Seconds n = eval(0.9*prd); // Stores expression 0.9*10ns or 9ns`

Actions:

- All WG Members: Please review proposals for following functions: `eval(x)`, `min(x,y,...)`, `max(x,y,...)` and cast your vote (before next week's meeting) on whether or not to include them.
- All WG Members: Please review proposals for following functions: `sin(x)`, `cos(x)`, `tan(x)` (and other trig functions), and `abs(x)`, cast your vote (before next week's meeting) on whether or not to include them.

Reference documents (If logged into your google account, can edit. If not, can only view.)
