The wording on this line includes the word "the" that would read better without it. The use of "the" here sounds like a specific group, instead of network operators in general.

Propose to change wording to: "cost, network operators increasingly combine optical distribution section..."

Current wording reads: "- Clause 1 provides an overview of the IEEE 1904.2 specifications, including..." The IEEE 1904.2 standard will be generally thought of as a single specification (singular, not plural). i.e. - line 35 also discusses a "specification" (not plural)

Propose to change "specifications" to "specification"

The EtherType that is written 0xA8-C8 should be written without the hyphen, i.e., 0xA8C8.

Change 0xA8-C8 to 0xA8C8. This change is also needed on: p.32, line 4 and line 20; p.47, line 8; p.85, 3rd row of table 8A-2; p.86, 5th row from bottom of table; p.87, lines 3 and 21 of table 8A-4; p.89, 3rd row of Table 8A-6; p.91, 3rd row of table 8A-8; p.89, 9th row from bottom of table 8A-8; p.94, 3rd row of table 8A-10; p.96, 1st row of table at top of page, p.96, 3rd row of table 8A-12; p.98, 1st row of table at top of page. Note: alternatively, the notation 'A8-C8', i.e., without the '0x' but with the hyphen, can be used.

The BRC believes the existing formatting of hex numbers is more common and more readable. No changes to the draft needed.

The EtherType that is written 0x88-09 should be written without the hyphen, i.e., 0x8809.

Change 0x88-09 to 0x8809. This change is also needed on pp. 88, 89, 92, 95, and 97 (in tables on those pages). Note: alternatively, the notation 'A8-C8', i.e., without the '0x' but with the hyphen, can be used.

The BRC believes the existing formatting of hex numbers is more common and more readable. No changes to the draft needed.

The address 0x01-80-C2-00-00-02 should be written without the '0x', i.e., as 01-80-C2-00-00-02.

Change 0x01-80-C2-00-00-02 to 01-80-C2-00-00-02. The change is also needed on pages 88, 89, 92, 95, and 97 (in the tables on those pages).

The BRC believes the existing formatting of hex numbers is more common and more readable. No changes to the draft needed.

In the last line in the right-most column of Table 8A-4, the phrase "Filled with zeroous when not used" is used. According to a Google "Merriam-Webster" search, "zeroous" is not a word.

Proposed to change "zeroous" to "zeros" (supposedly, either zeros or zeroes is the plural of zero, according to "Webster;" I think zeros is more common). The last cell of the right most column of Table 8A-10 (p. 96) and Table 8A-12 (p.98) uses similar wording and both use the word "zeros"

Changed "zeroous" to "zeros"
