Subject: **Request to co-author liaison requesting a re-visit to the 802.3bf effort for high accuracy**

            Approved at IEEE 1904 Working Group meeting, Beijing, China, June 3, 2015.

Dear Colleagues,

IEEE P1904 Working Group thanks IEEE P1588 Working Group for the request for collaboration. IEEE P1904 Working Group has discussed the request to co-author a liaison statement to IEEE P802.3 requesting a re-visit to the IEEE P802.3bf effort for higher accuracy. While there is interest in supporting the effort, IEEE P1904 Working Group feels that we do not have enough information on the issues in the current IEEE P802.3bf specification. We would appreciate a more detailed description of the issues in the current 802.3bf specification to understand the actual problems and concrete specific examples on how to address them.

The next IEEE 1904 Working Group meeting will be held via teleconference in August. The detailed information will be posted in the URL below. Should the members of IEEE 1588 wish to join this call to discuss about the above matters we will be happy to allocate sufficient agenda time. If our scheduled Working Group meeting is too late, we can schedule a separate teleconference just for this discussion.

---
