

P802.1Qcz Status

Paul Congdon

July 2019

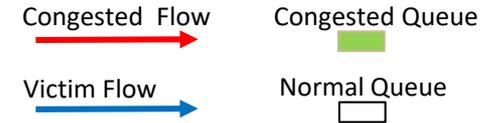

Agenda

- P802.1Qcz background and references
- Draft standard status and strategies
- Next steps

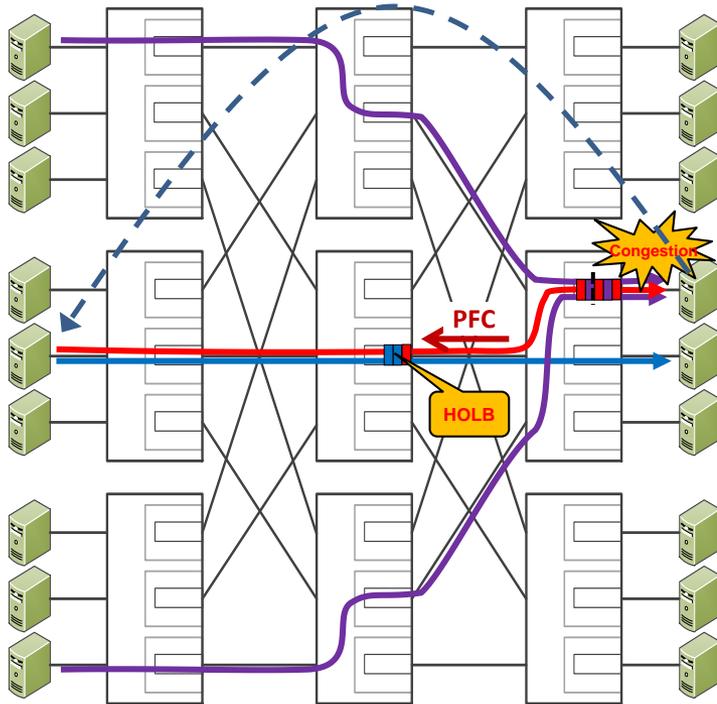

Short Summary

- Change summary since May meeting
 - Impact of Qcr restructuring – based on Qcr/D1.1
 - Reference diagram update
 - Forwarding process clause restructuring
- Editor's draft d0.2 posted to Qcz page
 - <https://1.ieee802.org/tsn/802-1qcz/>

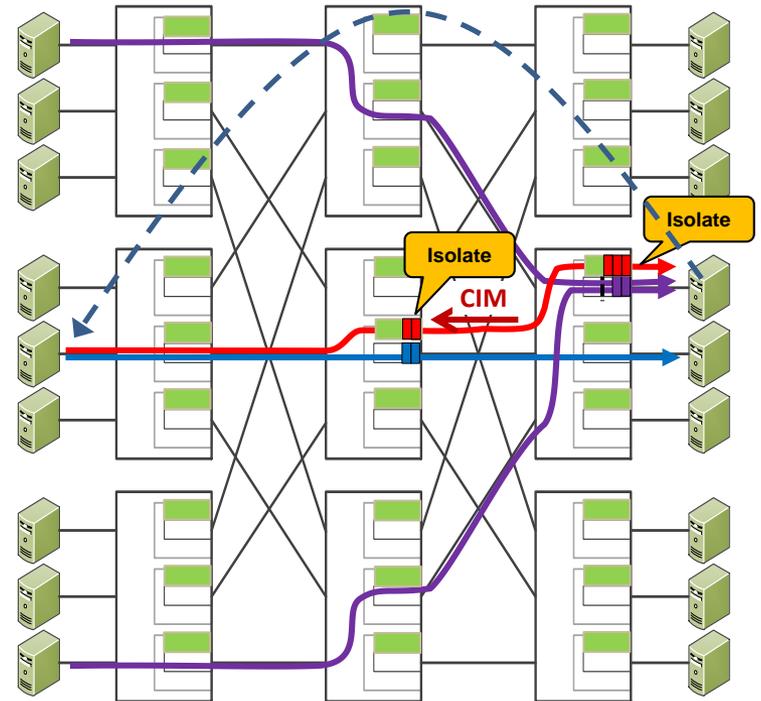

One Slide Congestion Isolation Refresh

Today – Without Congestion Isolation

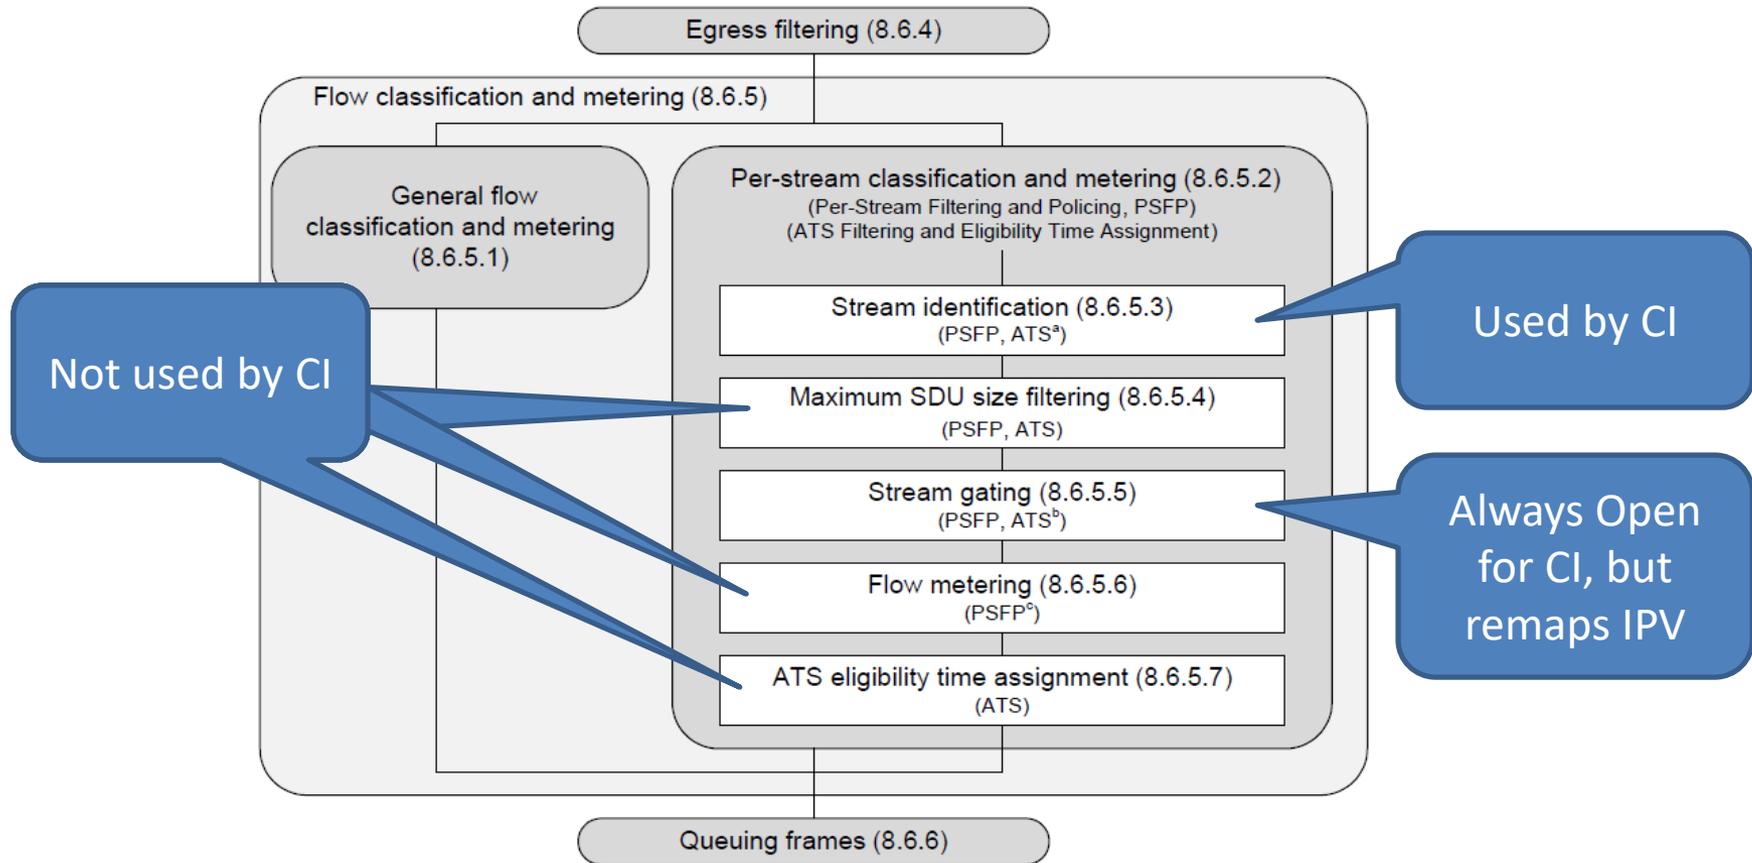

Congestion Isolation

Proposed changes aligned with Qcr

- Based on Mick Seaman proposal for Qcr 8.6.5 restructuring
 - <http://www.ieee802.org/1/files/public/docs2019/cr-seaman-8-6-5-organization-0719-v02.pdf>
- Use of per-stream filtering and metering elements:
 - 8.6.5 Flow classification and metering
 - Minor updates to figure 8-13 and text to include CI
 - 8.6.5.1 General flow classification
 - 8.6.5.2 Per-stream classification and metering
 - 8.6.5.2.2 PSFP support
 - 8.6.5.2.2 ATS support
 - 8.6.5.2.3 CI support - (new clause)
 - 8.6.5.3 Stream identification
 - 8.6.5.4 Maximum SDU Size Filters
 - 8.6.5.5 Stream gating
 - 8.6.5.6 Flow Meters
 - 8.6.5.7 ATS Schedulers
 - 8.6.6 Queuing frames
 - 8.6.10 Stream gate control state machines
 - NOTE: May need some text in here indicating that stream gates are always open for CI
 - 8.6.12 Congestion Isolation state machines – (possible new clause)
 - NOTE: Need to decide if such machines are needed for maintaining order between queues
 - Prefer to put this in clause 98 for CI specifically.

Qcr Diagram Relevance

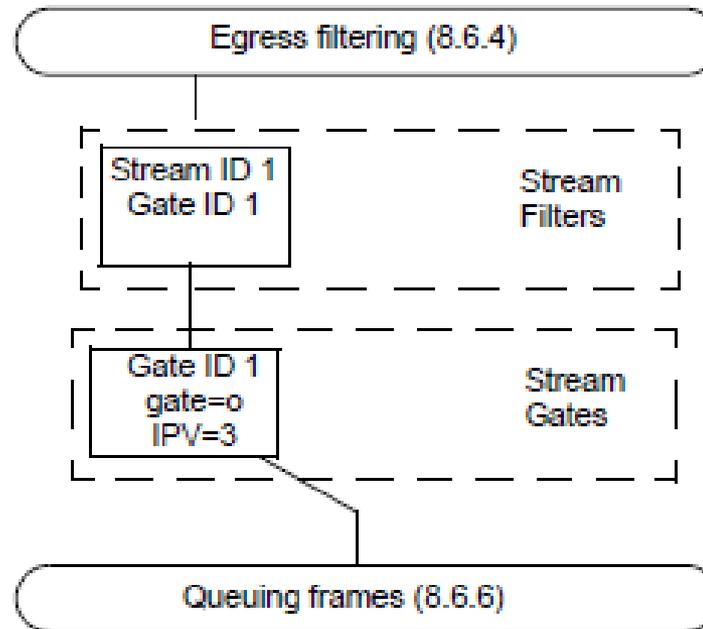

^aIdentifies the stream and the processing (PSFP, ATS, both, or neither) applied to each frame.

^bCan determine internal frame processing priority, and can (separately) enforce permitted arrival times for scheduled streams. Both optional for any given stream, but can provide coexistence with strict time scheduled traffic.

^cRequired PSFP functionality, supports MEF 10.3 flow metering, Can use and modify discard eligible frame marking, for both PSFP and ATS.

Figure 8-13—Flow classification and metering

CI Specific Forwarding Figure

KEY

Stream ID: stream filter instance identifier (8.6.5.1)

Gate ID: stream gate instance identifier (8.6.5.1, 8.6.5.2)

Figure 8-16—Congestion Isolation filtering and assignment functions

Next Steps

- Refactor clause 8 for Qcr changes
- Document variables and functions
- State Machines or pseudo-code as needed.
- Task Group Ballot
