# 60802 - EDITION 2

Some topics

Routing
Route redundancy

- Many industrial automation systems rely on routing (and may do it in the future too), especially in large installations e.g. DCS
- Redundacy (routes, system, flows/streams) remains important – relation to Detnet
- To be discussed, in this context
  - Multiple TSN configuration domains – CNC/s
  - Clock synchronization
  - Identify further potential gaps
