GroupResolution   **Decision of Group:**   **Disagree**

Reason for Group's Decision/Resolution

In order to support optimized HO, it is desired to transfer contexts about the MS between serving station and target station.
But, if the detail information need to be shared through backbone, how to share the context or the specific context to be shared
 will be different at each different deployment of network. it is not the scope.

During the Kobe meeting, Harry discussed together and he agreed to the resolution.

Comment   **Type** Technical   **Part of Dis** ☒ **Satisfied** ☐   **Page** 167   **Line** 38   **Fig/Table#**   **Subclause** 6.3.22.4.2

This is a mandatory requirement, so the word shall is better than should in this sentence.

Suggested Remedy

Change "should" to "shall"

GroupResolution   **Decision of Group:**   **Principle**

6.3.23.5 MBS in an MR network
In MR networks, MBS transmission within an MBS zone shall be synchronized. In Multi-MR-BS-MBS
case, MR-BSs <insert>may</insert><strikeout>should</strikeout> be synchronized in network level as described in section <insert>6.2.22.2</insert><strikeout>6.3.23.2</strikeout>.

Reason for Group's Decision/Resolution

The page number is not 167 but 168.
If we follow the section 6.2.22.2, it is not the mandatory feature.
The right reference for MBS is not 6.3.23.2 but 6.2.22.2.

Group's Notes

Comment by:	Harry Bims	**Membership Status:** Member	**Date:** 15-Aug-2008

Comment # 73   **Document under Review:**   **Ballot ID:** 802.16jR0

Comment   **Type** Technical   **Part of Dis** ☒ **Satisfied** ☐   **Page** 274   **Line** 46   **Fig/Table#**   **Subclause** 11.13.36

This is a mandatory requirement, so the word shall is better than should in this sentence.

Suggested Remedy

Change "should" to "shall"

GroupResolution   **Decision of Group:** **Principle**

Reason for Group's Decision/Resolution

The text was from 16Rev2. Since 16j has to be aligned with 16Rev2, the comment should be submited to 16Rev2.

Change "will" to "may"

Reason for Group's Decision/Resolution

It may cases where the RS wants to advertize that it can accept subordinate RSs. In this case the zone maybe present in order to allow
fast HO for MRSs or net entry for poterntial RSs.
The other case is that of supporting R-amble.

Comment   **Type** Technical   **Part of Dis** ☒   **Satisfied** ☐   **Page** 261   **Line** 30   **Fig/Table#**   **Subclause** 11.7.28

According to the Style Manual;
"The use of the word will is
deprecated and shall not be used when stating mandatory requirements".

Suggested Remedy

Change "will" to "shall"

GroupResolution   **Decision of Group:**   **Principle**

Change "will" to "may"

Reason for Group's Decision/Resolution

That TLV is to show the capabilities to be supported, not to show the capability must be used.

parameter values can't be TBD in standard, there are a lot in proposed changes to table 548 in this amendment.

Suggested Remedy

Please specify all the place holder into proper numbers

GroupResolution   **Decision of Group:**   **Principle**

Adopt Contribution C802.16j-08/155r2

Reason for Group's Decision/Resolution

Group's Notes

Editor's Notes   **Editor's Actions**   a) done

Comment by:	Xuyong Wu	**Membership Status:**	Member	**Date:** 4-Sep-2008

Comment # 325   **Document under Review:**   **Ballot ID:** 802.16jR0

Comment   **Type** Technical   **Part of Dis** ☒   **Satisfied** ☐   **Page** 263   **Line** 1   **Fig/Table#**   **Subclause** 11.8.3.7.22

The TBDs in this sentence shall be specified, also in Page 290 line 58

Suggested Remedy

Please specify all the place holder into proper numbers.

GroupResolution   **Decision of Group:**   **Principle**

The proposed text change :
The maximum EIRP parameters are reported in dBm and quantized in <insert>0.5</insert><strike>1</strike>dB steps ranging from <insert>-64</insert><strikeout>[TBD]</strikeout> dBm (encoded 0x00) to <insert>63.5</insert><strike>out>[TBD]</strikeout>dBm (encoded 0xFF).

Reason for Group's Decision/Resolution

We adopt the value and unit from "11.8.3.2 Maximum Tx power" of Rev2/D6a

Group's Notes

Editor's Notes   **Editor's Actions**   g) editor disagrees

The values used in were -128dBm to 127dBm in 1dB steps to keep the definition of RS EIRP lined up with BS EIRP and also the definition of Station EIRP that is already defined in Table 165b (D7) MR_NBR-INFO.

| **Comment by:** | Roger Marks | | **Membership Status:** | Member | | **Date:** 8-Sep-2008 12: |

Comment # 326   **Document under Review:**   **Ballot ID:** 802.16jR0

Comment   **Type** Editorial   **Part of Dis** ☒ **Satisfied** ☐   **Page** 0   **Line** 0   **Fig/Table#**   **Subclause** 0

This document is not ready for submittal to RevCom because, according to the IEEE-SA Standards Board Operations Manual, Subclause 8.1.2:

Up to three amendments can be approved before the standard shall be revised, unless the base standard has been approved or reaffirmed within the past three years. In the latter case, multiple amendments may be added until the base standard is three years old or three years have elapsed since the most recent reaffirmation of the standard. After the three-year period, RevCom shall defer consideration of additional amendments or corrigenda until a revision or a two-year extension request is approved by the IEEE-SA Standards Board.

The base standard (IEEE Std 802.16-2004) is more than three years old, and it has been subject to three amendments (802.16e, 802.16f, and 802.16g). Therefore, this amendment cannot be approved until the current 802.16 revision project is complete.

Suggested Remedy

Defer submission to RevCom until the current 802.16 revision project is complete and the resulting draft is approved. Revise draft to ensure that it is fully aligned, editorially, with the P802.16Rev2 revision draft. Ensure that draft is consistent with the other ongoing project (namely, P80216h) that would amend the same document.

GroupResolution   **Decision of Group:** **Principle**

Group agree the comments.
Group has started the ad hoc for alignment with Rev2 draft before entering sponsor ballot.
And group made alignment with D5 and approved the text changes required for alignment with D6a.
And ad hoc group will keep the work for alignment with Rev2 until it release as standard.
Please refer to 08/144 and 08/145r1 for the result of alignment to Rev2/D5 and Rev2/D6a.

Reason for Group's Decision/Resolution

The following comments submitted in the Pre-ballot Mandatory Editorial Coordination need to be double-checked:

SECTION I: Items/issues that shall be resolved before the ballot begins:

Copyright

* If applicable, all copyright permission for excerpted text, tables, and figures shall be submitted to the IEEE prior to the start of ballot. If there are missing permission response letters, please submit them immediately.

Prior to sending them to me, please ensure that the following are included in each response letter you obtain from the copyright owner:

* The permission response is on company letterhead (where applicable) or the original email from the copyright owner should be forwarded to me if the individual is the copyright owner (rather than a company)

* Permission has to be granted

* For world rights use of the material in the standard (either modified or unmodified, as requested by you)

* To modify and reprint in all future revisions and editions of the standard

* For use in all media known or hereinafter known

Sample permission request and response letters are available at the following Internet location:

<http://standards.ieee.org/guides/style/index.html>.

The following items indicate the need for copyright permission letters:

Excerpted text in x.x.

Table X

Figure X

Reproduced document in Annex X

Suggested Remedy

Modify draft as necessary. Prepare response as necessary.

Comment   **Type** Editorial   **Part of Dis** ☒ **Satisfied** ☐   **Page** 0   **Line** 0   **Fig/Table#**   **Subclause** 0

The following comments submitted in the Pre-ballot Mandatory Editorial Coordination need to be reviews:

Section II: Items/issues that shall be resolved before the final recirculation

* Please review the use of trademarks in the draft, if applicable. References to commercial equipment or products in a standard shall be generic and shall not include trademarks or other proprietary designations. Where a sole source exists for essential equipment or materials, it is permissible to supply the name of the trademark owner in a footnote. The proper use guidelines for trademarks shall be determined by the trademark owner. Trademark owners must grant written permission before their trademarks may be referenced in a standard.

* Trademarks or other proprietary designations that are not commercial equipment or products should be avoided in standards. If used however, all trademarks shall be credited to the trademark owner in the front matter of the standard. The following text shall introduce any mention of specific trademark information:

The following information is given for the convenience of users of this standard and does not constitute an endorsement by the IEEE of these products. Equivalent products may be used if they can be shown to lead to the same results.

* If the draft contains a registration of objects (for additional information, visit the IEEE Standards Web site <http://standards.ieee.org/regauth/index.html>), the working group shall submit the document to the IEEE Registration Authority (IEEE-RA) for mandatory coordination (submit to a.n.weaver@ieee.org for review). The text containing the registration information should be highlighted in the draft and the clause should be noted in the email. If the working group believes that the draft may potentially contain a registration of objects or if the working group would like information about setting up a registration, contact the IEEE-RA as early as possible to prevent a delay in approval by the IEEE-SA Standards Board. Search on the following words: object identifier, unique identifier, and assignment of unique numbers.

* Separate electronic files of figures shall be supplied in TIFF format (unless created in FrameMaker).

Suggested Remedy

Modify draft as necessary. Prepare responses as necessary.

GroupResolution   **Decision of Group:** **Agree**

editor will make necessary action.

Reason for Group's Decision/Resolution

Group's Notes

Editor's Notes   **Editor's Actions**   a) done

Editor searched the entire document but not find any tradmark or reference to commercial equipment. And the draft does not include the registration object.

Comment # 332   **Document under Review:**   **Ballot ID:** 802.16jR0

Comment   **Type** Technical   **Part of Dis** ☒ **Satisfied** ☐   **Page** 3   **Line** 5   **Fig/Table#**   **Subclause** 3

According to definition 3.125, a STR (Simultaneous transmit and receive) relay is a relay mechanism where transmission to subordinate station(s) and reception from the superordinate station, or transmission to the superordinate station and reception from subordinate station(s) are performed simultaneously. However, in D6 the MAC operations of the relay were designed for the TTR relay only. Therefore, In order to clarify the STR relay, this contribution proposes modifications in the frame structure and RS network entry. Additionally, the relay zone is not required for this type of relay except when STR relay and TTR relay coexist in the same MR cell. So, we propose alternative STR relay frame structure to optimize the spectrum efficiency.

Comment # 333   **Document under Review:**   **Ballot ID:** **802.16jR0**

Comment   **Type** Technical   **Part of Dis** ☒ **Satisfied** ☐   **Page** 72   **Line** 53   **Fig/Table#**   **Subclause** 6.3.2.3.82

There are three basic data forwarding schemes defined in P802-16j/D6a (1) CID based forwarding for DL/UL, (2) CID based forwarding assisted by inserting DL Allocation Reference IEs in the MAPs for RS with centralized scheduling and variable forwarding delay (3) burst-based forwarding for UL during IR, BR and HR.

The CID based forwarding schemes require CID forwarding rules for DL/UL maintains at each RS, which has the benefit of zero signaling overhead to execute the forwarding operation. However, in a dynamic environment where the CID forwarding rules require frequent changes, updating CID tables via a MAC messages incurs overheads and causes disruption in the service. The service outage increases forwarding latency that is proportional to the frame duration, the RS hop count and the message lost probability. This is particularly troublesome for transparent RSs and the RS group. In both environments, the frequent changes of connections for an MS, which requires updating CID forwarding rules, could be caused by either the MS mobility or the CDMA ranging (PR and BR). Every time the MS sends a CDMA code for PR or BR, the access station (transparent RS or member of the RS group) may be re-selected by the MR-BS.

This is particularly important in RS group operations when selective forwarding is enabled. That is, not all of RS group members are configured by the MR-BS to forward the same data to the MS. For example, in case of too many connections required to be updated or included in a dynamic manner, connection list update based on the RS_Member_List_Update message may pose significant overheads, which consume valuable bandwidth. Moreover, some RS members of RS group may fail to decode the RS_Member_List_Update message before the designated Frame Action Number. As a result, the inconsistent data forwarding rules among members in the RS group could severely degrade the system performance especially when the same radio resource is re-used for different RS group members to forward different data to different MSs.

In CID based forwarding scheme, every RS shall parse each MAC PDU for checking the CID and updating the CID table. When an MS change an access station, it shall perform the DSx negotiations to change the relay path. The processes significantly increases the forwarding latency, and hence it's necessary to provide a fast forwarding scheme.

Comment   **Type** Technical   **Part of Dis** ☒ **Satisfied** ☐   **Page** 5   **Line** 44   **Fig/Table#**   **Subclause** 6.3.1.1

There is no management traffic between an RS and a BS. (There may be management traffic between an RS and an MR-BS and an RS and another RS.)

Suggested Remedy

Undo all changes in the paragraphs that addresses the management connection between the BS and the SS (i.e. p. 5, line 44 - p.6, line 9)
In addition, in separate paragraphs (or section) explain which management connection are possible between an MR-BS and an RS and between an RS and RS.

GroupResolution   **Decision of Group:** **Principle**

Connections are identified by a 16-bit CID. At SS/RS initialization, two pairs of management connections,
basic connections(UL and DL) and primary management connections(UL and DL), shall be established
between the SS/RS and the BS<insert>/MR-BS</insert>, and a third pairs of management connections(secondary management, DL and UL)may be optionally generated. These three pairs of management connections reflect the fact that there
are inherently three different levels of QoS for management traffic between an SS/RS and the BS<insert>/MR-BS</insert>. The basic connection is used by the BS<insert>/MR-BS</insert> MAC and SS/RS MAC to exchange short, time-urgent MAC management messages. The primary management connection is used by the BS<insert>/MR-BS</insert> MAC and SS/RS MAC to exchange longer, more delay-tolerant MAC management messages. Table 38 specifies which MAC management messages
are transferred on which of these two connections. In addition, it also specifies which MAC management
messages are transported on the broadcast connection.

Reason for Group's Decision/Resolution

RS can make connection with MR-BS. And RS can make same management connections with MR-BS as MS does with BS.
And the detail use of the connection can be referred by section 6.3.2.3(tables about MAC management messages.)

| **Comment by:** | Erik Colban | **Membership Status:** Member | **Date:** 10-Sep-2008 |

Comment # 361   **Document under Review:**   **Ballot ID:** 802.16jR0

Comment   **Type** Technical   **Part of Dis** ☒ **Satisfied** ☐   **Page** 103   **Line** 17   **Fig/Table#**   **Subclause** 6.3.9

Systems in this place of the standard includes BSs. It is inconceivable to add a requirement on BSs to support network entry for RS. Furthermore, "new RS" is not appropriate standards language (how new must an RS be to be considered new?)

Suggested Remedy

Remove change on lines 17-18

GroupResolution   **Decision of Group:** **Disagree**

Reason for Group's Decision/Resolution

This is to follow the convention in Rev2, note, it uses "a new SS or a new node", if we want to make this change, let us change in Rev 2 to remove "a new SS or a new node" first. It has been clearly stated that only MR-BS needs to support a RS network entry.

<u>Comment by:</u>   Erik   Colban   <u>Membership Status:</u>   Member   <u>Date:</u> 10-Sep-2008

<u>Comment #</u> 363   <u>Document under Review:</u>   <u>Ballot ID:</u> **802.16jR0**

<u>Comment</u>   <u>Type</u> Technical   <u>Part of Dis</u> ⊠ <u>Satisfied</u> ☐   <u>Page</u> 105   <u>Line</u> 50   <u>Fig/Table#</u>   <u>Subclause</u> 6.3.9

It is not clear how an RS can distinguish an MR-BS from a BS? And how does the RS distinguish an RS that supports sub-ordinate RS from one that does not? How does one prevent an RS from attempting network entry at a BS? Does the RS make this distinction based on the presence of the End-to-end Metric TLV? Do the MR-BS have a distinguishable OperatorID? Are the RSs pre-configured with Preferred Roaming Lists?

<u>Suggested Remedy</u>
Clarify the ND&S procedures for an RS.

<u>GroupResolution</u>   <u>Decision of Group:</u>   **Principle**

We understood the concerns of the comment and provide the clarification based on current 16j/D6a as follows :

1. It is not clear how an RS can distinguish an MR-BS from a BS?

RS can obtains this information from DCD(TLV information designated for RSs) indicates that a BS supports relay function, i.e., it is a MR-BS.
Relay is an incremental function. This is the same procedure as the MS network entry. The MS needs to know which release of BS supports.

2. And how does the RS distinguish an RS that supports subordinate RS from one that does not?

If a RS does not supports subordinate RS, then it should not perform ranging process or network entry procedure with its subordinate RS.

3. How does one prevent an RS from attempting network entry at a BS?

You can not. This is similar to MS. BS can not prevent a MS attempting network entry. An RS can operate as if it is an MS initially.

4. Does the RS make this distinction based on the presence of the End-to-end Metric TLV?

No, as responded at 3., RS cannot make distinction and End-to-end Metric is an optional TLV.

5. Do the MR-BS have a distinguishable OperatorID?

No, MR-BS is treated as a normal BS, which implemented some additional features.

To the MS, MR-BS is just one of the BS, therefore there is no requirement for distinguishable OeratorID.

6. Are the RSs pre-configured with Preferred Roaming Lists?
 RS is not related to the Roaming. But, as RS is controlled by an MR-BS, if needed, roaming should be handle by MR-BS.

Comment by: Lei Wang   **Membership Status:**   Member   **Date:** 10-Sep-2008

Comment # 370   **Document under Review:**   **Ballot ID:** 802.16jR0

Comment   **Type** Technical   **Part of Dis** ☒ **Satisfied** ☐   **Page** 1   **Line** 58   **Fig/Table#**   **Subclause** 1.3.4

The 16j MR needs to be added to Table 1 as another 802.16 Air Interface variant.
The name of "MR system" is used about 30 times in the 16j/D6a spec, but a definition is missing.
Define the MR system in Table 1 and section 12.8 as suggested below.

Suggested Remedy

Insert the following text in line 58 on page 1:
1.3.4 Air interface nomenclature and PHY compliance
append a new row in the Table 1 in 1.3.4 as indicate:
Designation Applicability PHY Specification System Features Duplexing Alternative
----
WirelessMAN-OFDMA Licensed bands
MR below 11 GHz 8.4 12.8 TDD

GroupResolution   **Decision of Group:**   **Principle**

Insert the following text in line 58 on page 1:
1.3.4 Air interface nomenclature and PHY compliance

Designation	Applicability	PHYSystem Specification	Features	Duplexing Alternative
WirelessMAN-OFDMA MR	Licensed bands below 11 GHz	8.4	-	TDD

Reason for Group's Decision/Resolution

For profile of MR, it will be handled after the resolution of the comments on "to be determined" at Rev2 to be aligned with Rev2.

Group's Notes

Editor's Notes   **Editor's Actions**   a) done

| **Comment by:** | Nimal Senarath | **Membership Status:** | Member | **Date:** 10-Sep-2008 |

Comment # 378   **Document under Review:**   **Ballot ID:** 802.16jR0

Comment   **Type** Technical   **Part of Dis** ☒   **Satisfied** ☐   **Page** 197   **Line** 18   **Fig/Table#**   **Subclause** 8.4.4.7

Current 16j spec does not cover the FDD opeartion. However, this spec modifies the 16e standard which includes both FDD and TDD operation. Therefore, it is proposed that the frame sructure is modified to accommodate FDD operation as well so that it provides a complete multi-hop relay specification.

Suggested Remedy

The current 16e FDD frame structure, which is provided in Rev2 document can be used for the relay operation for this purpose by appropriately including transprent and relay zones in the DL and UL subframes. Change the current titiles in the subsections 8.4.4.7 to indicate that they are for TDD mode. e.g. Section 8.4.4.7.1 Frame Structure for Transparent mode for TDD oepration. Then introduce new FDD sections relevant to those TDD sections with the added explanations or/and diagrams.

GroupResolution   **Decision of Group:**   **Disagree**

The group agreed the FDD support should be provided but the proposed remedy from C80216j-08/150r1 was insufficient.
The contribution will be updated and resubmitted at the next round.

Comment # 380　　　　　　　　**Document under Review:**　　　　　　　　　　　**Ballot ID:** **802.16jR0**

Comment　　**Type** Technical　　**Part of Dis** ☒　**Satisfied** ☐　　**Page** 168　　**Line**　　　**Fig/Table#**　　　**Subclause** 6.3.22.4.4

Currently, in P802.16j/D6, 6.3.22.4.1, following words are found for mobile RS(MRS) handover, The MRS Handover process hands off all the MSs attached to itself, along with the MRS, to a target MRBS. It follows the same procedures as described for an MS handover in section 6.3.22.2. In 6.3.22.4.4, the cancel of RS handover is defined.
However, there is no description on the MSs resource retain timer in the MRS. It is expected that to the aid of this timer, after the RS cancels its own handover, the MS may be connected back to the RS when HO drop happens.

Suggested Remedy

6.3.22.4.4 MRS drops during handover
The MRS shall retain the connections, MAC state machine, and PDUs associated with the attached MS for service continuation until the expiration of Resource retain timer.

Comment # 381   **Document under Review:**   **Ballot ID:** 802.16jR0

Comment   **Type** Technical   **Part of Dis** ☒ **Satisfied** ☐   **Page** 2   **Line** 63   **Fig/Table#**   **Subclause** 1.6

It is difficult to understand the sentence "The RS PHY can only support one segment.". Does this indicate that a RS can only transmit the data in one segment. I assume that this is not the intention. However, it could be interpreted in this way.

Suggested Remedy

Suggest to delete this sentence or add some clarification.

GroupResolution   **Decision of Group:** **Agree**

delete the sentence "The RS PHY can only support one segment." at page 2, line 53.

Reason for Group's Decision/Resolution

Group's Notes

Editor's Notes   **Editor's Actions**   a) done

Comment by:	Peiying Zhu	**Membership Status:**	Member	**Date:** 10-Sep-2008

Comment # 382   **Document under Review:**   **Ballot ID:** **802.16jR0**

Comment   **Type** Technical   **Part of Dis** ☒ **Satisfied** ☐   **Page** 38   **Line** 50   **Fig/Table#**   **Subclause** 6.3.2.3.60

In 6.3.2.3.60, it is stated that:
"...The message can be sent over the relay zone in operation mode or in the access zone (unicast) during the neighborhood measurement phase (if neighbor measurement is required by the MR-BS) and during the configuration phase for providing relay link usage and configuration information in the network entry procedure. It is also used to inform subordinate RSs of any changes to the configuration of the relay link that may occur after the RS has entered the network."
In 11.24.5, it is mentioned that the frame configuration TLV informs the usage of frame structure to the subordinate relay stations. However, this information alone is not sufficient to perform such tasks as resource allocation for RSs more than one hop away from MR-BS in centralized scheduling, and interference management in distributed scheduling.
Therefore, we need to clarify how the frame configuration message shall be interpreted by the subordinate RS

Suggested Remedy

Adopt contribution C80216j-08/146 or latest version.

GroupResolution   **Decision of Group:** **Principle**

Adopt C802.16j-08/146r1
and add following text at the table 11.25.1 :
"bit #12 can be set to "1" only when STR relay is used."

Comment # 384   **Document under Review:**   **Ballot ID:** **802.16jR0**

Comment   **Type** Technical   **Part of Dis** ☒ **Satisfied** ☐   **Page** 85   **Line** 9   **Fig/Table#**   **Subclause** 6.3.3.8.2

In CID based forwarding scheme, every RS shall parse each MAC PDU for checking the CID and updating the CID table. When an MS change an access station, it shall perform the DSx negotiations to change the relay path. The processes significantly increases the forwarding latency, and hence it's necessary to provide a fast forwarding scheme.

Suggested Remedy

Adopt the contribution C802.16j-08/147 or later version

Comment   **Type** Technical   **Part of Dis** ☐ **Satisfied** ☐   **Page** 131   **Line** 21   **Fig/Table#**   **Subclause** 6.3.10.3.2.1

Clarify the behavior of the transparent RS and the RS group during periodical ranging, correct references, and add new references

Suggested Remedy

In some cases, the superordinate station of an SS/RS may want to initiate ranging based on the channel measurements from data traffic or a CDMA-based bandwidth request ranging code received from the SS/RS. To initiate the periodic ranging process, the superordinate station shall send an unsolicited RNG-RSP to the SS/RS.

<insert>--</insert> If superordinate station is a transparent RS receiving a CDMA-based bandwidth request, the MR-BS and the RS shall follow the procedure defined in <strikeout>6.3.6.1.2</strikeout><insert> 6.3.5.1</insert>.

<insert>--</insert> If the superordinate station is a transparent RS <insert>or non-transparent RS in an RS group</insert><strikeout> receiving data traffic and relaying on the uplink only</strikeout>, it shall transmit an MR_RNG-REP to the MR-BS on the RS basic CID to request that the MR-BS send an unsolicited RNG-RSP with the necessary adjustments to the SS. <insert>(see Figure 101a, Figure 101b, Figure 104b and Figure 104c)</insert>

<insert>--</insert> If the superordinate station is a non-transparent RS in centralized scheduling mode <strikeout> or a transparent RS relaying on both uplink and downlink</strikeout>, it shall request bandwidth from the MR-BS on which to send the unsolicited RNG-RSP (see <strikeout>6.3.6.1.2</strikeout> <insert> Figure 101h and Figure 104a</insert>).

<insert>--</insert> If the superordinate station is a non-transparent RS in distributed scheduling mode, it shall send the RNG-RSP directly to the SS without interaction with the MR-BS.<strikeout> If an MS is being served by an RS group, the procedures in 6.3.10.3.1.1 shall be applied</strikeout>.
