Charter and Scope of Maintenance TG Rapporteur Group

The IEEE 802.16 Working Group's Maintenance Task Group is opening a new Rapporteur Group for Maintenance issues:

- Miscellaneous [*Misc*] Rapporteur Group (Chair: Sean McBeath)

This Rapporteur Group is chartered to conduct discussions on various maintenance issues that are brought forward to the IEEE 802.16 Working Group and that require early consideration and recommended resolutions. The recommended resolutions will be formally resolved in a current revision, corrigenda or other amendment project, in the next scheduled ballot resolution process. An example of such maintenance issues is the recent liaison statement received from the WiMAX Forum <http://ieee802.org/16/liaison/#08_052>. The recommended resolutions from the Rapporteur Group will be resolved during the usual ballot resolution process in the Maintenance Task Group at Session #57 in Kobe, Japan.

All Rapporteur Group discussions will take place on the Maintenance TG reflector, not by teleconference or other means. The Maintenance TG reflector is established as:

<http://dot16maint-reflector.wirelessman.org>.

Message subjects will begin with the tags "[MISC]".

For contributions and other Rapporteur Groups documents, participants are asked to use the password protected upload directories that have been established on the 802.16 web site at

<http://memberupload.wirelessman.org>

The specific upload area is:

Maint_Misc

Access to reading, subscribing to, and posting to the Maintenance TG email reflector and upload areas is limited to WG Members and Observers.

The Maintenance TG reflector is also open to discussion of other Maintenance TG-related topics.
