

# CAUI-4 Chip – Chip Spec Discussion

# Chip-Chip Considerations

- Target: low power, simple chip-chip specification to allow communication over TBD loss with one connector
  - Similar to Annex 83A in 802.3ba
    - 25cm or ~10 inches over PCB
    - If we apply 1.7dB loss / inch we get 17dB + Connector (~1dB)
      - Meg6\_HighSR-Narrow (kochuparambil\_01\_0112)
  - Compare to OIF SR / MR
    - SR: 15.4dB
    - MR: ~20dB
  - ghiasi\_02\_0912\_optx mentions 30cm
    - 18-20dB loss budget
- Potential differences with KR4:
  - Lower loss budget supports lower power, smaller receiver design
  - Reduced latency & complexity
    - No FEC
    - No in-band transmitter training
      - Adaptive Rx (SFP+)
      - Assume “system management”
      - Spec similar to 802.3ba CAUI

# Interface Discussion & Implications

- Chip-Chip
  - If loss is kept to <20dB, there is potential for non DFE or light DFE based implementations which avoids MTTFPA issue
    - CTLE designs are able to support greater than 10dB
      - Previous discussions had 15dB – 18dB loss
      - VSR 28G has 100mVpp eye opening at 1E-15
    - 802.3bj KR4 test 1 and 2 targeting  $10^{-12}$  with 16dB channel and high level of RMS broadband noise, 30dB with lower level of RMS broadband noise (without FEC)
      - High noise and high loss will be significantly relaxed for chip to chip

Applied even-odd jitter	0.035	0.035	0.035	0.035	UI
Applied RMS broadband noise	10	2.8	6.3	3.2	mV

<sup>a</sup>For each test channel,  $a_0$  is limited to a maximum value of 0.1 and  $a_1$ ,  $a_2$ , and  $a_4$  are limited to a maximum value of 0. There is no minimum value specified for  $a_2$ .

<sup>b</sup>The frequency of the sinusoid must be greater than 100 MHz.

<sup>c</sup>Random Jitter is specified at a BER of  $10^{-12}$ .

# OIF MR ILmin/max

## Channel ILmin and ILmax Graph

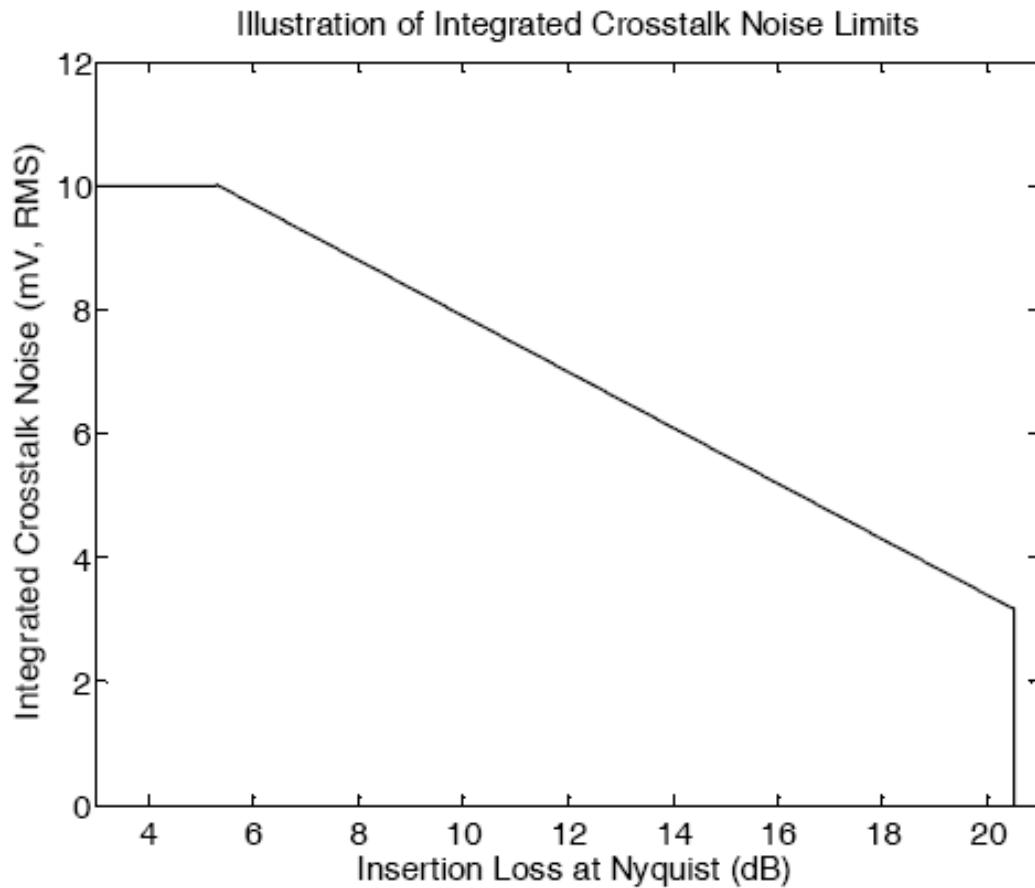

$$IL_{\max} = \begin{cases} 1.083 + 2.436 \sqrt{\frac{f \times 28.05}{f_b}} + 0.698 \frac{f \times 28.05}{f_b}, & f_{\min} \leq f < \frac{f_b}{2} \\ -17.783 + 2.694 \frac{f \times 28.05}{f_b}, & \frac{f_b}{2} \leq f \leq f_b \end{cases}$$

- $IL_{\max} (14.025 \text{ GHz}) = -20 \text{ dB}$
- $f_{\min} = 50 \text{ MHz}$
