IEEE Std 802.3ca is not going to be approved in 2019. Also, it is not likely to be Amendment 5.
Amendment numbers should only be added to drafts when the assumed order has been announced by the 802.3 Chair.

SuggestedRemedy

On line 1 change "201x" to "20xx"
On line 3 delete "Amendment 5-"

Response *Response Status* **C**

ACCEPT.

Cl **1** *SC* **1.3** *P* **24** *L* **5** # 590

Anslow, Pete Ciena

Comment Type **TR** *Comment Status* **A**

This draft adds a reference to ITU-T G.652, 2016 in addition to the existing reference to ITU-T G.652, 2009.
While all of the references to G.652 in this draft have been changed to dated references to G.652-2016, this would leave the 27 existing references to G.652 in IEEE Std 802.3-2018 ambiguous as to which version is being referenced.

SuggestedRemedy

Either:
Change back to the D2.0 text which changes G.652-2009 to G.652-2016
or:
Bring the 27 existing undated references to G.652 in to the draft and make them all dated references.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Change back to the D2.0 text which changes G.652-2009 to G.652-2016. Make all G.652 references undated.

See http://www.ieee802.org/3/ca/public/meeting_archive/2019/09/anslow_3ca_1_0919.pdf for discussion on G.652 use in IEEE Std 802.3-2018.

Cl **30** *SC* **30.5.1.1.2** *P* **31** *L* **46** # 501

Hajduczenia, Marek Charter Communications

Comment Type **TR** *Comment Status* **A**

A comment against D2.0 requested changes to MAU type description. The changes did introduce an issue, though. For example, 25/10GBASE-PQG-D3 description is correct (1x25G continuous transmission / 1x10G burst mode reception, i.e., OLT MAU with continuous donwstream and burst mode upstream); however, descriptions for all U type MAUs are wrong (for example, 25/10GBASE-PQG-U2, reads now 1x25G continuous transmission / 1x10G burst mode reception).

SuggestedRemedy

Change all U type MAU descriptions in 30.5.1.1.2 to indicate they are "burst-mode transmission" and "continuous reception"

Conflicting requirements:
C142 PMA clause says that "The ONU shall implement automatic detection of receive path differential encoding, and switch in the
decoder as appropriate."

on the other hand, PMA control register bit 1.29.15 is R/W and it enables/disables the differential encoding in both the OLT and ONU

SuggestedRemedy

Change "R/W" to
"R/W in OLT
RO in ONU"

Response *Response Status* **C**

ACCEPT.

Cl **45** *SC* **45.2.1.23a.2** *P* **35** *L* **40** # 609

Kramer, Glen Broadcom

Comment Type **T** *Comment Status* **A** *post-deadline*

In January 2019 meeting, we discussed the issue of MDIO addresing for separate instances of PCS and PMA (see hajduczenia_3ca_2_0119.pdf and remein_3ca_3_0119.pdf). We seemed to agree to use DEVAD (MMD) to address individual instances, but that agreement was never reflected in the draft. The existing Table 45-1 does provide a way to address up to 4 instances for the PMA, but there is only a single address for PCS.

It is also not clear whether the "PMA/PMD" grouping makes sense for .3ca. Our model assumes N identical instances of PMA, but only a single instance of multi-wavelength PMD.

SuggestedRemedy

Either change the existing addresses 8 through 11 to read "Separated PCS/PMA (n)" or add a separate set of addresses for PCS instances in the reserved space.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Insert a new subclause "143.2.6 MDIO addressing model for multi-channel architecture" with the following content:

The MDIO addressing model for multi-channel architecture is defined as follows:
- Separate physical ports on the OLT are managed by separate Station Management entities (STAs - see 45.1.2).
- Within each physical port, separate channels are addressed via port address (PRTAD - see 45.3.5).
- Within each channel, separate layers (PMA, PCS, etc.) are addressed via device address (DEVAD - see 45.3.6) as shown in Table 45-1.
- A common PMD that spans multiple channels is addressed via the numerically-lowest PRTAD associated with that PMD.

Cl **56** *SC* **56.1.2** *P* **55** *L* **11** # 504

Hajduczenia, Marek Charter Communications

Comment Type **T** *Comment Status* **A**

A comment against D2.0 added footnotes to 25GMII instances. Footnote a) implies the use of 25GMII and XGMII halves to achieve assymetric data rates. Yet 25GMII is defined as capable of 25G and 10G operation, hence the reference to XGMII is not needed and may be considered confusing.
To further add to confusion, we have also heavily used the term "xMII" to imply the 25GMII or XGMII when the actual clock rate across the MII does not matter for the purpose of description. There are in total 85 instances where xMII is used in the draft (drawings and text alike).
To avoid discussion on actual physical implementation of 25GMII and XGMII, it might be best to use a generic term we already define (xMII) where referring to a generic MII between RS and PCS and not distinguish the speed unless specifically needed.

SuggestedRemedy

Suggest to change "25GMII" with "xMII" in Figures 141-1, 142-1, 144-1, Figure 56–5a, and Figure 143–17

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

In 143.4.1, change "The 25GMII interfaces have the following characteristics" to "The 25GMII interface is defined in Clause 106." - mark the cross reference accordingly. Strike the following list (3 items).

Editor has license to verify the use of 25GMII and XGMII terms in the draft and align them as necessary.

Kramer, Glen Broadcom

Comment Type **T** *Comment Status* **A**

Table 144-6 has several issues:
1) Some rows refer to singular PMD, some refere to plural PMDs.
2) "PMDs use a PON P2MP protocol" is wrong. PMDs do not use any protocols. They convert serial optical stream to electrical and vise versa.
3) the only table with a caption "Explanation". Most other tables use caption "Description"
4) "PMD power budget class" should be called "PMD power class"
5) Descriptions for most rows properly point to the relevant PMD class, except the description for the coexistence parameter. This description just repeats the already given definition.

SuggestedRemedy

Modify the table 141-6 as shown in kramer_3ca_4_0919.pdf. Make cross-references live.

The editor's note in 141.5.1, the reference to non-existent 143.4.4, and the editor's note in 143.4.1.2 render this draft unready for progression to SA ballot - hence a required comment

SuggestedRemedy

Include a new eye mask definition and remove editor's note in 141.5.1.
Populate 143.4.4 with suitable "details" in 143.4.4 and remove editor's note in 143.4.1.2

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Remove the editor's note page 76, line 19.

The commenter's position (see comment #417 against D2.0) was that the proposed eye masks are tighter than they needed to be for the FEC we are using. The view of 802.3ca optics suppliers is that they are consistent with existing 25G EML and DML technology and are not burdensome. Note also that the purpose of higher FEC gain is to allow a smaller eye opening at the RX at worst case loss/noise, not to allow for or encourage a significantly more closed eye at the TX.

For proposed text for 143.4.4, see post-deadline comment #608.

Kramer, Glen Broadcom

Comment Type **T** *Comment Status* **A** *post-deadline*

The option of allowing 2 vs 3 sync patterns was only added so that in case when SP1 and SP2 are the same, the OLT may send one less SYNC_PATTERN MPCPDU per discovery attempt. This saving of downstream bandwidth is negligible, but its adds complexity to ONU parsing and processing. Also it creates ambiguity wrt the SPLength fields. If OLT sent SP Count to 2, but in DISCOVERY it had 3 non zero lengths, what should ONU trust?

SuggestedRemedy

Simplyfy the protocol by always requiring 3 SYNC_PATTERN messages, even if SP1 and SP2 patterns are the same.

The specific changes are shown in kramer_3ca_10_0919.pdf

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Implement changes per
http://www.ieee802.org/3/ca/public/meeting_archive/2019/09/kramer_3ca_10_0919.pdf

The SP1 is written with its LSB on the left, and MSB on the right. The bit order should be specified, similar to how it was done in Clause 76.

SuggestedRemedy

The transmission bit sequence is binary 1 followed by:
1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010
1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010
1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010
1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010 1010

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

The proposed solution includes two repeated bits which will remain even in the balanced mode.

Change

The SP1 synchronization pattern zone covers Ton, Trx_settling, and TCDR intervals and has the value of 0x1-(55)32.

To

The SP1 synchronization pattern zone covers T_{on}, T_{rx_settling}, and T_{CDR} intervals and has the value of 0x1-(AA)₃₂. The transmission bit sequence consists of 257 bits of alternating 1s and 0s, starting with 1.

Cl **142** *SC* **142.1.3.1** *P* **116** *L* **52** # 576

Kramer, Glen Broadcom

Comment Type **TR** *Comment Status* **A** *SBD*

The transmisison order of SBD needs further clarification. For various numeric constants in PCS, we show transmission order as LSB to MSB.

The SBD pattern is different (for consistency with 802.3av). The SBD pattern is constructed using BD and SP values defined in 802.3av(SBD257 = 1 + BD[64] + SP[64] + <inv>BD[64] + <inv>SP[64], see slide 11 in http://www.ieee802.org/3/ca/public/meeting_archive/2018/01/kramer_3ca_2_0118.pdf. The SP and BD are transmitted most-significant byte first, each byte is transmitted LSB first.

SuggestedRemedy

There are two options:

#1) To claryfy SBD transmission order, add a binary sequence, as it was done in 802.3av.

#2) Don't define SBD value in 802.3ca, jusr reference SP and BD in 802.3av.

The commenter prefers option #1. Both options are shown in kramer_3ca_7_0919.pdf

In D2.1, we have renamed FecDecode to PassToFecDecoder (see comment #358) to more accurately reflect the behavior of the function. We should do the same with its counterpart function FecEncode. These functions do not perform any action of encoding or decoding (which take relatively long time in LDPC). These fnctions only pass the data from one functional block to another and return immediately.

SuggestedRemedy

Rename FecEncode to PassToFecEncoder in 142.2.5.3 and in SD 142-10, Also move the lines that set TxInput<256:0> and TxInput<257> to be next to each other.
The exact changes are shown in kramer_3ca_3_0919.pdf.

Definition of ResetScrambler() function is wrong. We don't reste to IEI_EQ anomore. Also, the definition said that function erstes both scrambler and descrambler. This is not correct. It only resets one, depending on whether it is called in the ONU or the OLT.

SuggestedRemedy

1) Use the following definition of ResetScrambler() function in 142.2.5.3:

ResetScrambler()
Description: This function resets the scrambler to the value of 0x3-(FF)₇, i.e., each of the bits S0 through S57 of the scrambler shift register is set to 1 (see Figure 49–8).

2) Replace the definition of ResetScrambler() function in 142.3.5.3 with a new function ResetDescrambler

ResetDescrambler()
Description: This function resets the descrambler to the value of 0x3-(FF)₇, i.e., each of the bits S0 through S57 of the descrambler shift register is set to 1 (see Figure 49–10).

3) In SD 142-18, replace ResetScrambler() with ResetDescrambler().

4) In 142.2.2, replace the sentence "In the ONU, at the beginning of each burst, the scrambler is initialized with the value of 0x3-(FF)7, i.e., each of the bits S0 through S57 is set to 1 (see Figure 49–8)."
with
"In the ONU, at the beginning of each burst, the scrambler is reset to a known initialization value (see the definition of ResetScrambler() function in 142.2.5.3)."

5) In 142.3.3, replace the sentence "In the OLT, at the beginning of each burst, the descrambler is initialized with the value of 0x3-(FF)7, i.e., each of the bits S0 through S57 is set to 1 (see Figure 49–8)."
with
"In the OLT, at the beginning of each burst, the descrambler is reset to a known initialization value (see the definition of ResetDescrambler() function in 142.3.5.3)."

Comment #485 against D2.0 was correct. The state GET_NEXT_BLOCK contains a blocking function that takes 257 bit times to execute. While this function is executing, no exit conditions from this block are tested. This causes the SignalFail and MatchFound conditions to be tested simultaneously. So, we need to handle the case when both conditions evaluate to true.

SuggestedRemedy

change the State diagram 142-15 as shown in kramer_3ca_2_0919.pdf.

The text under 142.4 is out of place. This section should be an introduction to the entire PMA. Instead it focuses only of the deifferential encoding, which is a small part of PMA.

The following text is confusing and serves no purpose:
"(output bits represent changes to succeeding input values rather than in respect to a given reference)"

SuggestedRemedy

Use the following text:

The PMA adopts the serial PMD service interface (PMD_UNITDATA, see 141.3.3 and 141.34) to the 257-bit wide interface of the PCS (PMA_UNITDATA, see 142.4.1). Where Nx25G-EPON operates over multiple channels, the PMA sublayer includes multiple identical instances of the transmit data path and/or the receive data path.

In the downstream direction (from the OLT to the ONUs), the PMA includes a differential encoding option (see 142.4.2 and 142.4.3). This encoding technique facilitates the use of lower bandwidth receivers at the ONUs.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Use the following text:

The PMA adopts the serial PMD service interface (PMD_UNITDATA, see 141.3.3 and 141.3.4) to the 257-bit wide interface of the PCS (PMA_UNITDATA, see 142.4.1). Where Nx25G-EPON operates over multiple channels, the PMA sublayer includes multiple identical instances of the transmit data path and/or the receive data path.

In the downstream direction (from the OLT to the ONUs), the PMA includes a differential encoding option (see 142.4.2 and 142.4.3). This encoding technique facilitates the use of lower bandwidth receivers at the ONUs.

Since the reference for MPCPDU timestamp is the ESH time, an MPCPDU cannot be split over multiple envelopes, either separated in time or overlapping in time on multiple channels. Doing so will cause the Timestamp to reference the first ESH at the Tx side, but to be compared to the second ESH at the receiving side (since by the time the frame is completely received and parsed and timestamp is checked, the second ESH time will be latched and it will overwrite the first ESH time)

SuggestedRemedy

Add clarifications and specific requirements to avoid spltting MPCPDUs over multiple envelopes. Specific changes are shown in kramer_3ca_9_0919.pdf.

This comment is intended to supersede comment #573 and it provides a more complete solution.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Implement changes per http://www.ieee802.org/3/ca/public/meeting_archive/2019/09/kramer_3ca_9_0919.pdf, with the following changes:
- change "In case the ONU receives partially overlapping PLID envelope allocations" to "In case the ONU is given partially overlapping PLID envelope allocations"

Cl **144** *SC* **144.3.6.1** *P* **208** *L* **44** # 612

Kramer, Glen Broadcom

Comment Type **T** *Comment Status* **A** *post-deadline*

The response tp comment #213 against D2.0 stated:
"- Definitions of timestamp should be corrected and will therefore be different."
and
"Timestamps in GATEs are not the same as the content of MPCP Local time counter. Each timestamp is pre-compensated by the RTT value of the destination ONU."

This comment addresses the above issues.

SuggestedRemedy

Change the definitions of Timestamp fields in GATE and REGISTER_ACK as shown in kramer_3ca_12_0919.pdf.

The definitions for rest of the fields appears correct.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Change the definitions of Timestamp fields in GATE and REGISTER_ACK as shown in http://www.ieee802.org/3/ca/public/meeting_archive/2019/09/kramer_3ca_12_0919.pdf.

Where a subset of bits is taken to represent a single field or a single numericvalue, we should use the notation "M:N" instead of "N to M". This will make it consistent with C45 and vector notation used throughout the draft.

SuggestedRemedy

Apply the following changes:
1) Table 144-2: change "2 to 7" to "7:2"
2) Table 144-4: change "3 to 4" to "4:3"
3) Table 144-4: change "7 to 15" to "15:7"
4) Table 144-7: change "3 to 4" to "4:3"
5) Table 144-7: change "7 to 13" to "13:7"
6) Table 144-8: change "0 to 1" to "1:0"
7) Table 144-8: change "3 to 4" to "4:3"
8) Table 144-8: change "5 to 6" to "6:5"
9) Table 144-8: change "8 to 14" to "14:8"
10) Table 144-11: change "0 to 3" to "3:0"
11) Table 144-11: change "4 to 6" to "6:4"
12) Table 144-12: change "0 to 3" to "3:0"
13) Table 144-12: change "4 to 7" to "7:4"

Kramer, Glen Broadcom

Comment Type **TR** *Comment Status* **A** *573*

MPCPDUs are not allowed to be fragmented, as this breakes the timestamping reference.

A fragmented MPCPDU would be transmitted in two or more PLID envelopes. Every time an ESH is received, a new MPCP time is latched, overwriting the previous time. A timestamp in fragmented MPCPDU may reference the time of the first ESH, but this timestamp is parsed out of an MPCPDU and checked after the entire MPCPDU is received, which means the MPCP time will already be overwritten by the later ESH.

SuggestedRemedy

The draft shall specify that MPCPDU shall not be fragmented. Add the following statement at the end of definition of "Fragmentation" flag (new paragraph):

"If the value of LLID field represents a PLID, the Fragmentation flag shall be equal zero."

Add PICS.

Allowing the SYNC_PATTERN MPCPDUs to be sent to registered ONUs creates a lot of ambiguity wrt the time of switching and handling of lost messages. It also may require dual comparators in the OLT PCS to simultaneously hunt for the old and new patterns. If we keep this capability, we need to add a significant amount of details on how the ONU and OLT should process the switch (wait for all SPs and swich once? Switch on each SYNC_PATTERN one SPn at a time?) To clarify this we probably will need 2 new state diagrams.

SuggestedRemedy

Disallow pattern change after Discovery. To do that, delete the text "(unless changed by the OLT)" on line 46 and delete the paragraph on lines 48-50.

Cl **144** *SC* **144.3.6.7** *P* **221** *L* **14** # 613

Kramer, Glen Broadcom

Comment Type **TR** *Comment Status* **A** *post-deadline*

Figure 144-18 SYNC_PATTERN MPCPDU shows field sizes that do not match the description. We should decide whether we want to show the second octet of PatternInfo to be in PatternInfo or to be the first octet in the filed Pattern (this is what the figure assumed). Moving it to the Pattern field may make it more aligned with the state diagrams 144-20 and 144-22, where we have these statements
'MsgSyncPattern.Value <== MsgBurstSync.Value[SpSeq]'

'MsgBurstSync.Value[SpSeq] MsgSyncPattern.Value'

(both 'Value' fields are 257-bit patterns.)

SuggestedRemedy

Two options are suggested:

The first option is shown in kramer_3ca_11_0919.pdf. It moves the last octet of PatternInfo to be part of Pattern field.

The second option is shown in kramer_3ca_13_0919.pdf. This solution keeps PatternInfo as is. It adds extra text to tie last bit of PatternInfo and 32 bytes of Pattern into a single 257-bit field called Value, which is used in state diagrams 144-20 and 144-22.

The author prefers the first solution.

Kramer, Glen Broadcom

Comment Type **T** *Comment Status* **A**

The last paragraph is 144.3.7 is very confusing and does not reflect the behavior specified in state diagrams.

When an ONU wants to deregister, it deregisters unconfitionally. Sending REGISTER_REQ/NACK to the OLT is just a courtesy call.

SuggestedRemedy

Replace the last paragraph in 144.3.7 with the text provided in kramer_3ca_6_0919.pdf. Observe italics.

Response *Response Status* **C**

ACCEPT IN PRINCIPLE.

Use the following text, make sure ACK, Flag, and NACK are in italics:

There may exist situations when the OLT requires an ONU to re-register. The OLT initiates such reregistration by transmitting a REGISTER MPCPDU to the ONU. This MPCPDU is transmitted in an envelope with unicast PLID assigned to this ONU.

If the Flag field in the REGISTER MPCPDU has the value of ACK, the ONU performs a fast registration sequence where it simply responds with the REGISTER_ACK MPCPDU, while remaining registered at all times. If the Flag field in the REGISTER MPCPDU has the value of NACK, the ONU deregisters and goes through a complete discovery sequence, as outlined above.

There may also be situations when the MPMC Client (MPCP) in the ONU determines that this ONU needs to deregister. The ONU transmits a REGISTER_REQ MPCPDU with the Flag field equal to NACK before unconditionally deregistering itself. Depending on the causes for such a deregistration, the MPMC Client (MPCP) determines whether the ONU is allowed to participate in a new discovery sequence or not; the criteria for such a determination is outside the scope of this standard.

Sentence "In the OLT transmission is continuous,…" either needs a comma after the OLT, or better, should be re-phrased.

Missing comma after "In the case of the OLT"

The text includes a reference to the OLT
Envelope Commitment process, but is missing a reference to the Envelope Activation process

SuggestedRemedy

Change the paragraph staring with "Grants are not explicitly used by the OLT…" with

"Since the OLT transmits continuously, grants are not explicitly used by the OLT in the downstream direction. However, the OLT does use the envelope descriptors, OLT Envelope Commitment process (see 144.3.8.9), and Envelope Activation process (see 144.3.8.11) in a manner similar to how these processes are used in the ONUs. In the case of the OLT, the transition from Inter-Envelope Idle to data transmission begins with the issuing of an envelope descriptor by the OLT MPMC Client (MPCP). The envelope descriptor is processed by the OLT Envelope Commitment state diagram and Envelope Activation state diagram as described for the ONU."
