**1) Replace Figure 144-18 with the following**

2) In the definition of *PatternInfo*, change "16-bit field" to 8-bit field"
3) In Table 144-8, delete last two rows
4) Modify the definition of field Pattern as follows:

This is a 33-octet field, containing 257-bit synchronization pattern element (sub-field *Value*). The ONU transmits the corresponding burst synchronization pattern matching the exact bit sequence that it received in the *Value* sub-field.
