Comment Type TR Comment Status D Registers

Is this really intended to be an optional requirement? "The default value for each bit of the MultiGBASE-T1 PCS control register should be chosen so that the initial state of the device upon power up or reset is a normal operational state without management intervention."

SuggestedRemedy

Suggest to rewrite as an informative text, which I believe it is.

There are at least 28 instances of the keyword "should" in the draft (excluding front page), none of which strikes me as intended optional requirement. Each and every instance of the keyword "should" ought to be reviewed and if the given statement is not intended as an optional requirement, text ought to be rewritten as informative instead.

Proposed Response Response Status W

PROPOSED ACCEPT IN PRINCIPLE.

hange: The default value for each bit of the MultiGBASE-T1 PCS control register should be chosen so that the initial state of the device upon power up or reset is a normal operational state without management intervention.

To: The default value for each bit of the MultiGBASE-T1 PCS control register is chosen so that the initial state of the device upon power up or reset is a normal operational state without management intervention."

In addition:

P40 L25 and P46 L 39 change "should be" to "is"

P105 L48 change "should be" to "are"

There are 2 we have to discuss in the TF, because it isn't clear if these are requirements.

They look like they may need to become 'shall', or 'is'.

>> on page 99, lines 17-19, there are two "should's" regarding initialization of the precoder, that may be needed to be made shalls. The task force needs to discuss this.

>> page 134 L12 (rx_lp_ping "should be" looped back – but this appears automatic in the state diagram Figure 149-25 p137 L25) (would need to become 'is')

The other "shoulds" are in the template, e.g. at the bottom of the PICS tables.

Cl 78 SC 78.3 P57 L5 # 5

Comment #65 against P802.3cj D2.0 defined the order of items in Table 78-1. See <http://www.ieee802.org/3/cj/comments/P8023-D2p0-Comments-Final-byID.pdf#page=14>
Sort the result in "speed/reach" order using the following set of rules.
1. Increasing speed.
2. Increasing reach (maximum supported distance over the medium).
3. Decreasing number of lanes

The following supplemental rules address are included to address special cases.
4. PHY "family designations, by convention, are assigned a reach of 0.
5. "Copper" PHYs precede "Fiber" PHYs (all else being equal).
6. Alphanumeric sort (all else being equal).

Applying these rules puts 2.5GBASE-T1 before 2.5GBASE-T, 5GBASE-T1 before 5GBASE-T, and 10GBASE-T1 before 10GBASE-T.

SuggestedRemedy

Change the editing instruction to:
"Insert a row for 2.5GBASE-T1 after 2.5GBASE-KX (as inserted by IEEE Std 802.3cb-2018), insert a row for 5GBASE-T1 after 5GBASE-KR (as inserted by IEEE Std 802.3cb-2018), and insert a row for 10GBASE-T1 after 10GBASE-KR in Table 78-1 as follows (unchanged rows not shown):"

Comment Type T Comment Status D Test Modes

[JITTER TEST MODE] The jitter test in 149.5.2.3.1 is designed for the low-frequency square wave signal used in BASE-T PHYs and the test in 149.5.2.3.2 is designed for the at-speed test patterns (JP03A & JP03B) used in backplane phys. A control bit is needed to allow test mode 2 to support both tests, and additional language is needed specifying which signals to use in which tests.

Comments tagged JITTER TEST MODE should be treated as a group.

SuggestedRemedy

Table 45-155e: Add new rows after Reserved row, and adjust reserved row to allocate bits 0,1 of register 1.2313 (Test mode control) register based: 1.2313.1:0= 00 (Normal Sqaure Wave), 1.2313.1:0= 01 (JP03A pattern), 1.2313.1:0= 10 (JP03B pattern), 1.2313.1:0= 11 (Reserved),

Insert new subclause 45.2.1.196.2 as follows:

45.2.1.196.2 Jitter test control (1.2313.1:0)

When the transmitter is in test mode 2, bits 1.2313.1:0 control the pattern of the jitter test signal. A value of 0 0 transmits a square wave from the transmitter, a value of 0 1 transmits the JP03A pattern, and a value of 1 0 transmits the JP03B pattern. See 149.5.1 for more information.

Proposed Response Response Status W

PROPOSED ACCEPT IN PRINCIPLE.

Implement as proposed but refer to 145.5.2.3 which is where the jitter tests are defined.

Table 45-155e: Add new rows after Reserved row, and adjust reserved row to allocate bits 0,1 of register 1.2313 (Test mode control) register based: 1.2313.1:0= 00 (Normal Sqaure Wave), 1.2313.1:0= 01 (PRBS13Q pattern), 1.2313.1:0= 10 (Reserved), 1.2313.1:0= 11 (Reserved),

Insert new subclause 45.2.1.196.2 as follows:

45.2.1.196.2 Jitter test control (1.2313.1:0)

When the transmitter is in test mode 2, bits 1.2313.1:0 control the pattern of the jitter test signal. A value of 0 0 transmits a square wave from the transmitter and a value of 0 1 transmits the PRBS13Q pattern. See 145.5.2.3 for more information.

CI 149 SC 149.3.2.2 P87 L48 # 81

Slavick, Jeff Broadcom

Comment Type TR Comment Status D Interleaver

How the number of interleave frames is decided upon is not defined anywhere. So for 10G if one side requests 2-way, other 4-way which do you do? The shall in this line implies theres some definition on how to resolve that but I don't see any text for that (which is where the shall should be).

SuggestedRemedy

Change the text from "which shall be determined" to "which is determined".
 Add a sub-clause in the appropriate place which defines the priority resolution of the interleave request fields for 5G and 10G operations.
 Change PCT6 to refer to new sub-clause

Proposed Response Response Status W

PROPOSED ACCEPT IN PRINCIPLE.

TFTD

Note there are a few issues addressed in the resolution below, but the Task force needs to discuss that the commenter assumes that the interleave ratio needs to be symmetric on the link. As configured, it doesn't have to be, interleave depth is requested by the link partner.

P87 L48, Change "L is called the interleaving depth, and the possible choices of L are 1, 2, and 4, which shall be determined during the PAM2 training mode InfoField exchange." To "L is called the interleaving depth, and the possible choices of L are 1, 2, and 4. The interleaver settings requested in each direction of transmission may be different, and the value of L used by the transmitter is determined by the link partner and signaled during the PAM2 training mode InfoField exchange."

P 95 L45 in 149.3.2.2.16 RS-FEC superframe and round robin interleaving, add new first paragraph: "The interleaver depth L of the transmitter shall be set to the InterleaverDepth requested by the link partner during infocfield exchange, as specified in 149.4.2.4.5."

Add new PICS item PCT16 and renumber subsequent PICS:

Feature : Interleaver set to depth setting

Subclause: 149.3.2.2.16

Value: Interleaver depth set to value requested by link partner during infocfield exchange

Status: M

Comment Type ER Comment Status D Scaling

The use of "S" to represent scaling parameter is not advisable. Trying to see where this comes into play throughout the document on a search of "S" reveals so many instances that it is useless.

SuggestedRemedy

Change "S" to "Scale"

Proposed Response Response Status W

PROPOSED REJECT.

The use of S to represent the scaling parameter is consistent with the use in 802.3bq-2016 and 802.3bz-2016. This is where we got it. It's used in all Multi-Gig BASE-T PHYS.

113.1.1 Nomenclature

The 25GBASE-T and 40GBASE-T PHYs described in Clause 113 represent two distinct PHY types that share the same PCS, PMA, and MDI specifications subject to frequency scaling, and differences between the 25GMII and the XLGMII specifications. In order to efficiently describe the two PHYs, the nomenclature 25G/40GBASE-T is used to describe specifications that apply to both the 25GBASE-T and 40GBASE-T PHYs. Additionally, for parameters that scale with the PHYs data rate, the parameter S is used for scaling.

For 25GBASE-T, S = 0.625 and for 40GBASE-T, S = 1.

126.1.1 Nomenclature

The 2.5GBASE-T and 5GBASE-T PHYs described in this clause represent two distinct PHY types that share the same PCS, PMA, and MDI specifications subject to frequency scaling. In order to efficiently describe the two PHYs, the nomenclature 2.5G/5GBASE-T is used to describe specifications that apply to both the 2.5GBASE-T and 5GBASE-T PHYs. Additionally, for parameters that scale with the PHYs data rate, the parameter S is used for scaling.

For 2.5GBASE-T, S = 0.5 and for 5GBASE-T, S = 1.

Cl 149 SC 149.2.2 P76 L50 # 94

D'Ambrosia, John Futurewei, U.S. Subsidiary of Huawei

Comment Type E Comment Status D Terminology

The following statement is incorrect:
 MultiGBASE-T1 transfers data and control information across the following four service interfaces:
 a) 10 Gigabit Media Independent Interface (XGMII)
 b) Technology Dependent Interface
 c) PMA service interface
 d) Medium dependent interface (MDI)
 MDI is not a service interface See definition 1.4.324.

SuggestedRemedy

Reword
 MultiGBASE-T1 transfers data and control information across the following three service interfaces:
 a) 10 Gigabit Media Independent Interface (XGMII)
 b) Technology Dependent Interface
 c) PMA service interface

Proposed Response Response Status W

PROPOSED REJECT.

This is not consistent throughout 802.3.
 MDI is included in Service Primitives and Interfaces in Clauses 55, 97, 113, 126, etc.
 Commenter may want to consider creating a Maintenance request to remove this throughout 802.3.

Comment Type T Comment Status D EZ2

I think the name of the amendment could be improved from "Physical Layer Specifications and Management Parameters for Greater Than 1 Gb/s Automotive Ethernet".

This is an amendment for 2.5 Gb/s, 5 Gb/s, and 10 Gb/s PHYs and the title should state that.

Also there is likely to be a project for a 25G automotive PHY in the future and this would also be greater than 1G.

SuggestedRemedy

Change the title of the amendment to:
 "Physical Layer Specifications and Management Parameters for 2.5 Gb/s, 5 Gb/s, and 10 Gb/s Automotive Ethernet"

Proposed Response Response Status W

PROPOSED ACCEPT IN PRINCIPLE.

Change: "Draft Standard for Ethernet Amendment:Physical Layer Specifications and Management Parameters for Greater Than 1 Gb/s Automotive Ethernet"

To: Draft Standard for Ethernet Amendment:Physical Layer Specifications and Management Parameters for 2.5 Gb/s, 5 Gb/s and 10 Gb/s Automotive Electrical Ethernet."

Cl 44 SC 44.1.4.4 P30 L7 # 97

Lo, William Axonne Inc.

Comment Type **TR** Comment Status **D** Auto-Negotiation

Autonegotiation column is not in table 44-1.

In Table 125-2 (page 67) there is a column 98 showing Auto-Negotiation is optional for both 2.5GBASE-T1 and 5GBASE-T1.

However there isn't one for 10GBASE-T1.

Also note that autonegotiation is missing for 10GBASE-T as well.

SuggestedRemedy

Add column for clause 98 Auto-Negotiation to table 44-1 and put O in the 10GBASE-T1 row.

Add to the footnote

O = Optional

As a service to humanity we can optionally fix this for 10GBASE-T by putting a column for clause 28 Auto-Negotiation and put M in the 10GBASE-T row.

Proposed Response Response Status **W**

PROPOSED REJECT.

Clause 125 also has 125.2.4 which summarizes Auto-Neogotiation for 2.5G and 5G PHYs. Clause 44 does not have this. If we add the Auto-Negotiation Clauses to the table we'll also need to add a subcaluse in Clause 44 for this.

The commenter is encouraged to submit a comment to Maintenance to add this to Clause 44. If this is approved, a new comment can be submitted to ch to add this.

Cl 45 SC 45.2.1.18 P33 L12 # 98

Lo, William Axonne Inc.

Comment Type **TR** Comment Status **D** Registers

The 2 bits 1.21.5 and 1.21.4 are redundant since they are already defined in 1.18.5 and 1.18.4. Note that 1.11.11 states register 1.18 is for BASE-T1 ability.

Note that register 1.21 causes some issues in that it is for 2.5G/5G abilities and 2.5/5GBASE-T1 fits the criteria for both 1.18 and 1.21.

Nevertheless I don't think any other PHY capabilities are advertised twice and I think it is best if we advertise only in one location instead of 2.

SuggestedRemedy

Delete content in page 33 lines 11 to 48

Comment Type **T** Comment Status **D** Registers

The intent of registers 1.2314 and 1.2315 is to represent -12.7 dB to +12.7dB as an 8 bit number. However the description is a little confusing for the uninitiated in that these registers are described as 16 bits registers.

SuggestedRemedy

2 ways to fix this. Pick one. My preference is method 1.

1) Define the registers to be 8 bits only. Hence these 2 registers are 1.2314.15:8 and 1.2315.15:8 respectively.

Set 1.2314.7:0 and 1.2315.7:0 to reserved.

2) There is an example stating 0.0dB is 0x8000. Add 2 more examples where 12.7dB is 0xFF00 and -12.7dB is 0x0100. Note that this solution is not as clean as in theory bits 7:0 can show more resolution and we are now mixing decimal and binary representations with fractional 0.1dB.

Editor has editorial license to word and format either of the options above.

Comment Type TR Comment Status D EEE

Technically this is really clause 149.3.7.3 but for some reason the state diagrams appears after clause 149.3.8.2.

Figure 149-16 (page 115) has 3 L transitions into Figure 149-17 (Page 116). There is a corner case that makes things behave a little ugly that people may implement slight differently depending on interpretation. This change avoids the corner case.

Scenario:

T_TYPE(tx_raw) initially = LI at exactly a time lp_low_snr = true.
When this happens the state machine transitions into TX_L but does absolutely nothing and then immediately transitions into TX_WM state.
The intent here is to exit LPI when SNR is low.
But why enter LPI in the first place when the PHY already knows SNR is low.
Suggest remedy is to prevent entering Figure 149-17 when the PHY already knows that SNR is low.

SuggestedRemedy

Page 115 Figure 149-16.
Change the 3 T_TYPE(tx_raw) = LI to
(T_TYPE(tx_raw) = LI) * !lp_low_snr

Proposed Response Response Status W

PROPOSED ACCEPT.

Cl 149 SC 149.3.8.2 P116 L13 # 103

Lo, William Axonne Inc.

Comment Type TR Comment Status D PCS

Technically this is really clause 149.3.7.3 but for some reason the state diagrams appears after clause 149.3.8.2.
The tx_lpi_req variable gets stuck true if LPI is presented on XGMII for less than a full RS frame time and then goes to something that is not LPI. This will cause Figures 149-16 and 149-20 to get out of sync.

Scenario:

XGMII indicates LPI which causes
T_TYPE(tx_raw) = LI, enter TX_L state (page 116)
XGMII stops sending LPI before end of RS frame which causes
T_TYPE(tx_raw) = (C+D+E+S+T), enter TX_WN state but tx_lpi_req never gets set to false because tx_alert_start_next is never set true.
Since RS frame is not complete (rs_fec_frame_done is not asserted page 119)
tx_lpi_active remains false hence state machine moves from TX_WN to TX_C state.
Meanwhile with tx_lpi_req stuck at true, rs_fec_frame_done will trigger eventually and we move to SEND_SLEEP state and then onto SEND_QR state (page 119).
We are stuck there forever since tx_lpi_req is stuck at true.
Hence the EEE transmit state diagram (page 119) is out of sync with the PCS 64/65B transmit state diagram (page 115).
Remedy is to delay transition into TX_WN until tx_lpi_active is true to keep the 2 state diagrams in sync.

SuggestedRemedy

Page 116 Figure 149-17.
Change
lp_low_snr +T_TYPE(tx_raw) = (C + D + E + S + T)
to
(lp_low_snr + T_TYPE(tx_raw) = (C + D + E + S + T)) * tx_lpi_active

 Sedarat, Hossein Ethernovia
 Comment Type **T** Comment Status **D** Test Modes
 The transmit linearity test, as defined in 149.5.2.2, requires 2 test patterns: a low frequency short pattern to measure the accuracy of the PAM4 levels, and a high-frequency and long PRBS pattern to measure the transmit SNDR. Test mode 4 does not provide a provision to transmit 2 test patterns. Since the nonlinearity of the transmitter can be measured with respect to the ideal PAM4 levels, the short test pattern may not offer additional value. Also, the long high-frequency pattern of QPRBS13, as defined in 94.2.12.7, is constructed in a peculiar way which may be more fitting for a 100G-KP4 transmitter. A simple PRBS13 as the test pattern is as effective, more efficient to implement and less prone to misinterpretation of the specifications in another standard.

SuggestedRemedy

Replace "... transmit linearity test pattern defined in 94.29.4" with "... PRBS13 test pattern as defined in equation 94-3 and figure 94-6". And in subclause 149.5.2.2, add the following to the end of first sentence: "using ideal PAM4 level of 1/3 for effective symbol levels of ES1 and ES2."

Comment Type T Comment Status D Test Modes

I don't see where the frame error ratio comes from. If I assume this is actual MAC data with addresses and FCS, I get FER = $1e-12 * (800 + 22) * 8 = 6.6e-9$. I note that 149.5.3.2 does not add any MAC frame overhead.

SuggestedRemedy

Please check the math or describe better.

Proposed Response Response Status W

PROPOSED REJECT.

The comment description does not contain sufficient detail so that the TF can understand the specific changes requested by the commenter. In addition, the suggested remedy in the comment does not contain sufficient detail so that the TF can understand the specific changes requested by the commenter.

CI 149 SC 149.5.3.2 P160 L20 # 187

Brandt, David Rockwell Automation

Comment Type T Comment Status D Test Modes

149.5.3.1 seem inconsistent. 149.5.3.1 has "frame error ratio", but wouldn't these frames crossing XGMII also be counted as 149.5.3.2 "frame loss ratio" when they get to the MAC? There should be no further correction after RS-FEC. Both use the same link segment specified in 149.7.

SuggestedRemedy

Consider whether the same terminology, packet sizes and measurement points can be used.

Proposed Response Response Status W

PROPOSED ACCEPT IN PRINCIPLE.

TFTD

I believe the two error ratios are almost the same, the difference is whether you count frames, with RS-FEC added; or packets, data with RS-FEC bytes removed.

Dawe, Piers

Mellanox

Comment Type TR Comment Status D Registers

This register should contain "the current SNR operating margin measured at the slicer input ... to an accuracy of 0.5 dB", yet there is no indication of what "SNR operating margin" means (is the PHY supposed to measure the noise of the signal!? or infer it from FEC errors? or...) nor is "the slicer input" defined. Trying to set an accuracy on something so vague is not appropriate. Anyway, providing that accuracy at the extremes of the range is probably difficult and unnecessary.

SuggestedRemedy

Delete "to an accuracy of 0.5 dB"

Proposed Response Response Status W

PROPOSED REJECT.

This was discussed during a previous meeting and the decision of the group was to keep the accuracy, which matches MultiGBASE-T PHY's.

Cl 149 SC 149.1.6 P76 L43 # 197

Dawe, Piers

Mellanox

Comment Type TR Comment Status D Terminology

This is not a test specification.

Implementers (or testers) take responsibility for the accuracy of their test equipment. If someone wants to use 2%-accurate equipment and apply appropriate guard bands, that's OK.

In "The values of all components in test circuits shall be accurate to within $\pm 1\%$ unless otherwise stated", the "shall" is inappropriate.

Remarks about % tolerance muddy the water: Does 1 V mean 1 V any more? If asked for e.g. <1 V, and measured with 0.1%-accurate equipment, is 1.008 V acceptable?

Anyway, this topic does not fit with "conventions in this clause", and does not relate to the PCS.

SuggestedRemedy

Delete this sentence from here. If any substitute is needed, put it within 149.5 PMA electrical specifications, and use the language of a parameter definition, not a test requirement.

Proposed Response Response Status W

PROPOSED ACCEPT IN PRINCIPLE.

Delete ""The values of all components in test circuits shall be accurate to within $\pm 1\%$ unless otherwise stated"

A Maintenance request is required to remove this through 802.3. It is in Clause 97 and may be in others.

Comment Type T Comment Status D Registers

Transmit fault descriptions are in 45.2.1.7.4, Table 45-9, and Receive fault descriptions are in 45.2.1.7.5, Table 45-10. These need to be brought into the draft and updated to include the clause 149 references for 2.5GBASE-T1, 5GBASE-T1, and 10GBASE-T1. Additionally, I cannot find the reference to Transmit and Receive Faults in clause 149, although the abilities are referenced in 1.2310.

SuggestedRemedy

Bring 45.2.1.7.4 and Table 45-9, adding rows for 2.5GBASE-T1, 5GBASE-T1, and 10GBASE-T1 referencing the appropriate section of clause 149 for transmit faults. Bring 45.2.1.7.5 and Table 45-10, adding rows for 2.5GBASE-T1, 5GBASE-T1, and 10GBASE-T1 referencing the appropriate section of clause 149.

Add text, if necessary, for transmit and receive faults to clause 149.

Proposed Response Response Status W

PROPOSED ACCEPT IN PRINCIPLE.

Add the requested sections into the document.
TFTD text to be added.

den Besten, Gerrit

NXP Semiconductors

Comment Type TR Comment Status D MDI

There is currently only one MDI return loss template for all speeds. I think we should differentiate requirements for different speeds to allow looser spec for 2.5Gbps and 5Gbps. Otherwise these lower speeds will be overspecified. The easiest way to achieve this is by scaling all frequency values by S except for the 1MHz lower bound.

SuggestedRemedy

Change:

10 --> 10S

500 --> 500S

3000 --> 3000S

4000 --> Fmax

Remove:

For 2.5GBASE-T1, 5GBASE-T1, and 10GBASE-T1, the maximum applicable frequency for the MDI return loss is 4000 × S MHz.

Proposed Response Response Status W

PROPOSED ACCEPT IN PRINCIPLE.

Do not scale the lowest frequency as this is related to PoDL. We don't want to make this more restrictive with lower PHY speed.

Change:

500 --> 500S

3000 --> 3000S

4000 --> Fmax

Remove:

For 2.5GBASE-T1, 5GBASE-T1, and 10GBASE-T1, the maximum applicable frequency for the MDI return loss is 4000 × S MHz.

Comment Type T Comment Status D MDI

The MDI curve is discontinuous at 500MHz: 20dB versus 19.78dB.

SuggestedRemedy

Implicitly fixed by proposal to relax MDI return loss a bit. See next item.

Proposed Response Response Status W

PROPOSED REJECT.

There is no requirement for the MDI return loss to be continuous.

CI 149 SC 149.8.2.1 P163 L20 # 249

den Besten, Gerrit

NXP Semiconductors

Comment Type TR Comment Status D MDI

The MDI return loss at high frequency is tighter than necessary IMO. The MDI is far-end return loss which gets twice attenuated by insertion loss. This return loss component therefore doesn't worsen the RL/IL ratio. I think the currently specified link segment return loss and MDI return loss are not well balanced for a low relative cost. I would like to propose to relax the MDI return loss.

SuggestedRemedy

Formula 12-10*log(f/3000) change into 10-10*log(f/3000S) for 300S<f<3000S

Formula 12-20*log(f/3000) change into 10-20*log(f/3000S) for 3000S<f<Fmax

Proposed Response Response Status W

PROPOSED ACCEPT IN PRINCIPLE.

This requirement at the upper frequency is relaxed by the new formulas proposed by comment 269.

Comment Type T Comment Status D PCS

Figure 149-9 shows a multiplier associated with coefficient g_34. This is mathematically incorrect (although g_34=1 based on Equation 149-1). It can only cause confusions and mis-interpretations in the future when people look at this figure.

SuggestedRemedy

In figure 149-9, remove the multiplier next to g_34, and replace the arrowed line into that multiplier with a straight line connecting to the output of that multiplier. Also replace the text "g_34" with "g_34=1".

Comment Type T Comment Status D PCS

Figure 149-23 shows a multiplier associated with coefficient A₂. This is mathematically incorrect (although A₂=1 based on Equation 149-8). It can only cause confusions and misinterpretations in the future when people look at this figure.

SuggestedRemedy

In figure 149-23, remove the multiplier next to A₂, and replace the arrowed line into that multiplier with a straight line connecting to the output of that multiplier. Also replace the text "A₂" with "A₂=1".

Comment Type T Comment Status D Test Modes

In test mode 3, the PCS generates continuous pattern of {0,3} symbols into the precoder. The precoder output is then mapped into PAM4. This paragraph should be rephrased to make it clear. The proposed change is based on discussions with George.

SuggestedRemedy

Change this paragraph to:
 "Test mode 3 is for testing the precoder operation. When test mode 3 is enabled, the PCS shall generate a continuous pattern of {0, 3} symbols to be input to the transmit precoder specified in 149.3.2.2.19, to be precoded according to the Transmit precoder settings as determined by the value set in register 1.2309:10:9, or equivalent functionality if MDIO is not implemented, and transmitted by the PMA timed from its local clock source."

Comment Type T Comment Status D MDI

The MDI return loss specification as shown in Equation 149-27 is unnecessarily restrictive.

SuggestedRemedy

See the proposal on the last page of "vakilian_3ch_01_0719.pdf".
