Dudek, Mike

Marvell

Comment Type TR

Comment Status D

CL-IL difference

The differential to common mode conversion loss specification is very relaxed particularly at higher frequencies. As an example at 25GHz this specification is only approx 6dB more than the insertion loss. There is no specification for the common mode to common mode return loss of the Rx so all this common mode energy can be reflected back to the cable where through common mode to differential conversion it then becomes a differential signal interferer. Assuming this common mode to differential mode has approximately the same value as the differential to common mode conversion of approx 12.5dB this unwanted interferer is only 18.5dB below the wanted signal and will severely degrade the BER.

SuggestedRemedy

Add 10dB to this equation

Proposed Response

Response Status W

PROPOSED REJECT.

The basis for a 10 dB tightening of the limit is not obvious in the stated comment and the correlation to the degradation of the BER is not provided.

## 162.11.5 Differential to common-mode conversion loss

The difference between the cable assembly differential to common-mode conversion loss and the cable assembly insertion loss shall meet Equation (162-12) illustrated in Figure 162-7.

$$\text{Conversion\_loss}(f) - \text{IL}(f) \geq \begin{cases} 10 & 0.05 \leq f < 12.89 \\ 14 - 0.3108f & 12.89 \leq f \leq 40 \end{cases} \quad (162-12)$$

where

$\text{Conversion\_loss}(f)$  is the cable assembly differential to common-mode conversion loss at frequency  $f$  in dB

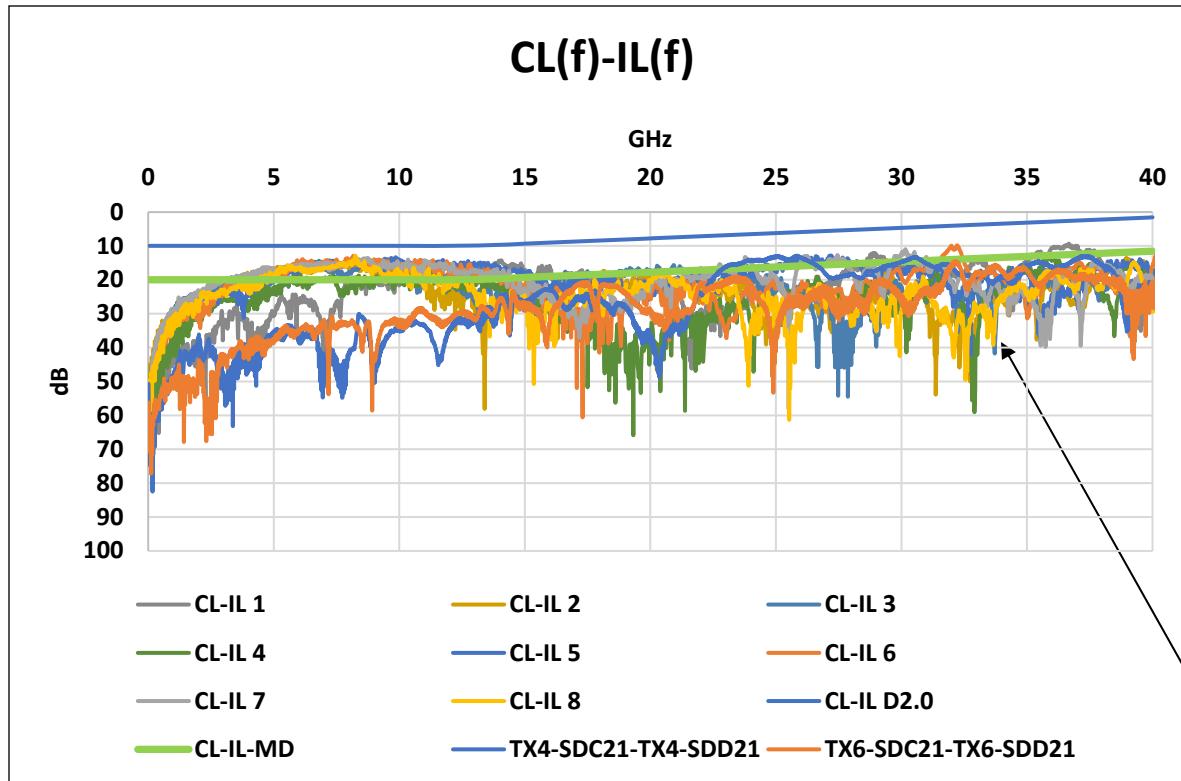

$\text{IL}(f)$  is the cable assembly insertion loss at frequency  $f$  in dB

$f$  is the frequency in GHz

Add 10 dB to 162-12  
Proposed resultant equation [(162-12)]

$$\text{CL}(f) - \text{IL}(f) \geq 20 \text{ dB } [0.5 \leq f \text{ GHz} < 12.89] \\ 24 - 0.3108 * (f \text{ GHz}) \text{ dB } [12.89 \leq f \leq 40]$$

# 162.11.5 Cable Assembly CL(f)-IL(f)

## 162.11.5 Differential to common-mode conversion loss

The difference between the cable assembly differential to common-mode conversion loss and the cable assembly insertion loss shall meet Equation (162-12) illustrated in Figure 162-7.

$$\text{Conversion\_loss}(f) - \text{IL}(f) \geq \begin{cases} 10 & 0.05 \leq f < 12.89 \\ 14 - 0.3108f & 12.89 \leq f \leq 40 \end{cases} \quad (162-12)$$

where

$\text{Conversion\_loss}(f)$  is the cable assembly differential to common-mode conversion loss at frequency  $f$  in dB

$\text{IL}(f)$  is the cable assembly insertion loss at frequency  $f$  in dB

$f$  is the frequency in GHz
