

802.3ck Frequency Domain Limits for Mated Cables

Alex Haser (alex.haser@molex.com)
17 June 2020

Overview:

- OBJECTIVE: To propose frequency domain limits for mated cable TBDs in the 802.3ck D1.2 draft
 - Differential to common-mode return loss (Section 162.11.4)
 - Differential to common-mode conversion loss (Section 162.11.5)
 - Common-mode to common-mode return loss (Section 162.11.6)
- The data on the following slides is measured 2m 25awg proof of concept (POC; see next slide) QSFP-DD cable

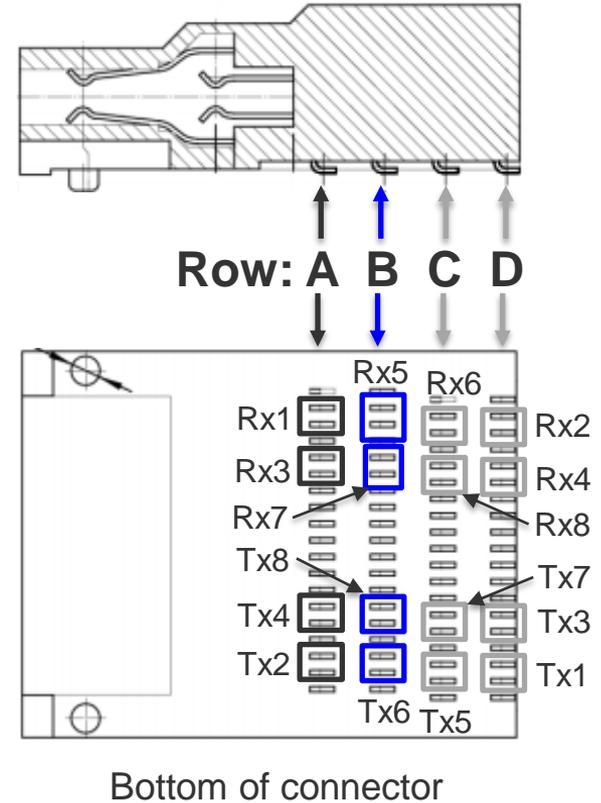

Proof of Concept Connectors and Cables:

- Proof of concept connectors are partially populated
 - Only the two shortest rows of contacts are available
- Cables were pinned out to accommodate these connectors:

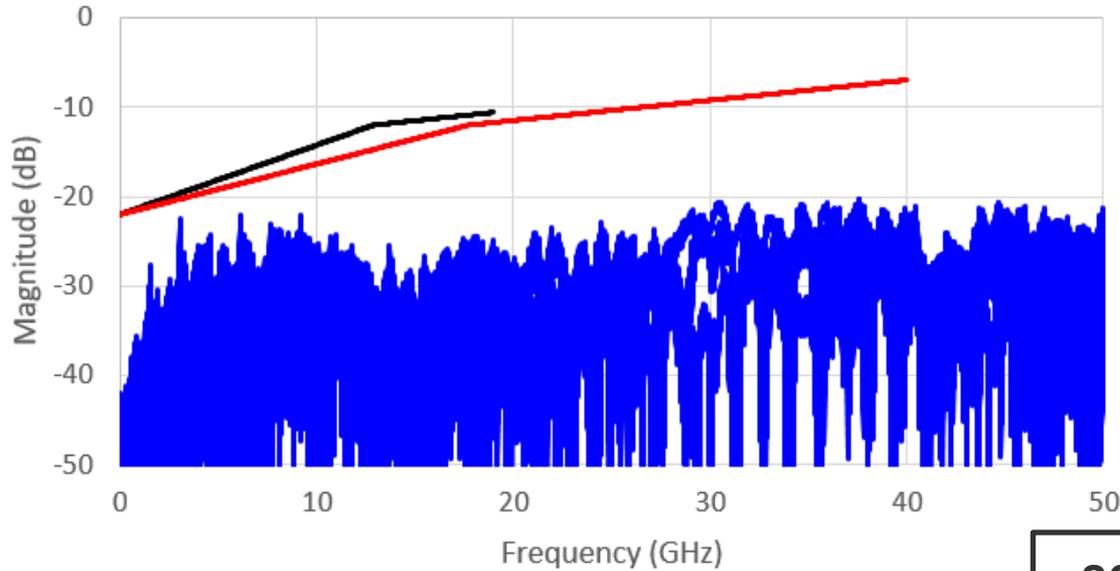

Cable Pinout:

P1	P2
Tx2	Rx5
Tx4	Rx7
Tx6	Rx1
Tx8	Rx3
Tx2	Rx5
Tx4	Rx7
Tx6	Rx1
Tx8	Rx3

Legacy Pairs
DD Pairs
 Unpopulated

Differential to Common-Mode Return Loss:

Key:

BLUE = POC Data

BLACK = 802.3cd

RED = 802.3ck proposal

802.3ck proposal:

$$\left(22 - \frac{15}{26.56}f\right) dB \quad 0.05 \text{ GHz} \leq f < 17.7 \text{ GHz}$$

$$\left(16 - \frac{6}{26.56}f\right) dB \quad 17.7 \text{ GHz} \leq f \leq 40 \text{ GHz}$$

Differential to Common-Mode Conversion Loss:

Key:

BLUE = POC Data

BLACK* = 802.3cd

RED = 802.3ck proposal

This limit to be revisited at a later date

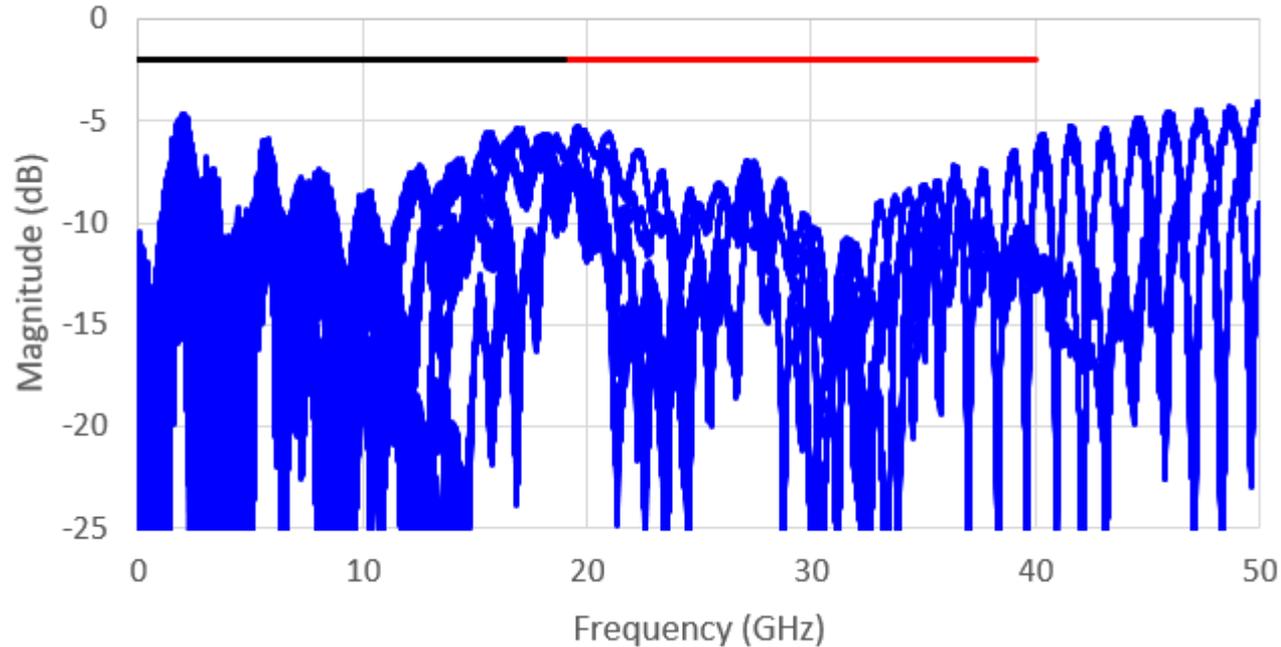

Common-Mode to Common-Mode Return Loss:

Key:

BLUE = POC Data

BLACK* = 802.3cd

RED = 802.3ck proposal

802.3ck proposal:

2 dB

$0.05 \text{ GHz} \leq f < 40 \text{ GHz}$

Proposal Summary:

- Differential to common-mode return loss (Section 162.11.4)

$$\left(22 - \frac{15}{26.56}f\right) \text{ dB} \quad 0.05 \text{ GHz} \leq f < 17.7 \text{ GHz}$$
$$\left(16 - \frac{6}{26.56}f\right) \text{ dB} \quad 17.7 \text{ GHz} \leq f \leq 40 \text{ GHz}$$

- Differential to common-mode conversion loss (Section 162.11.5)
 - This limit to be revisited at a later date
- Common-mode to common-mode return loss (Section 162.11.6)

$$2 \text{ dB} \quad 0.05 \text{ GHz} \leq f < 40 \text{ GHz}$$
