

Insert new section 145.2.5.2.1 as follows:

145.2.5.2.1 Alternative designation

Mode information is obtained by replacing the X in the desired variable or function with the letter of the Mode of interest. Modes are referred to in general as follows:

X

Generic Alternative designator. When X is used in a state diagram, its value is local to that state diagram and not global to the set of state diagrams.

Values:

A: Alternative A

B: Alternative B
