Haysam M. Kadry - Ford

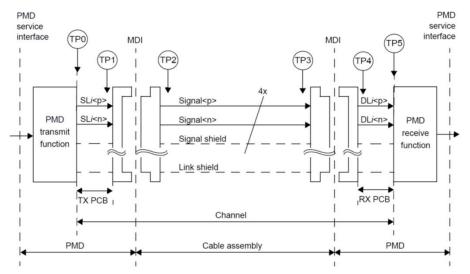

May 2021

# **Purpose**

802.3cy PCB and Test Fixture Considerations

# Background – 802.3bj/by/cd/ck

- The channel is defined between the transmitter and receiver blocks to include the transmitter and receiver differential controlled impedance printed circuit board and the cable assembly (link segment).
- Test points provide specification references for channel and cable assembly and RX and TX
- Test fixtures enable testing at test points module compliance board (MCB); host compliance board (HCB)

Test points	Description				
TP0 to TP5	The 100GBASE-CR4 channel including the transmitter and receiver differential controlled impedance printed circuit board insertion loss and the cable assembly insertion loss.				
TP1 to TP4	All cable assembly measurements are to be made between TP1 and TP4 as illustrated in Figure 92–2. The cable assembly test fixture of Figure 92–17 or its equivalent, is required for measuring the cable assembly specifications in 92.10 at TP1 and TP4.				
TP0 to TP2 TP3 to TP5	A mated connector pair has been included in both the transmitter and receiver specifications defined in 92.8.3 and 92.8.4. The recommended maximum insertion loss from TP0 to TP2 or TP3 to TP5 including the test fixture is specified in 92.8.3.6.				
TP2	Unless specified otherwise, all transmitter measurements defined in Table 92–6 are made at TP2 utilizing the test fixture specified in 92.11.1.				
TP3	Unless specified otherwise, all receiver measurements and tests defined in 92.8.4 are made at TP3 utilizing the test fixture specified in 92.11.1.				

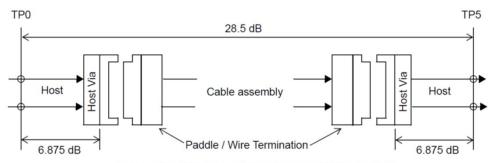

# Background – 802.3bj/by/cd/ck

### IEEE Standards - 25/50/100 Gb/s Operation – Shielded Cable

- 802.3bj 100GBASE-CR4 2-level PAM 25.78125 GBd per lane Channel loss budget (35 dB@12.8906 GHz). Link segment up to at least 5 m (22.8 dB@12.8906 GHz)
- 802.3by 25GBASE-CR and 25GBASE-CR-S 2-level PAM 25.78125 GBd per lane Channel loss budgets (35 dB, 29 dB, 28.02 dB)@12.8906 GHz. Link Segments 3-5 m (22.48 dB, 16.48 dB, 15.50 dB)@12.8906 GHz reach depending on FEC
- 802.3cd 50GBASE-CR, 100GBASE-CR2, and 200GBASE-CR4- PAM4 -26.5625 GBd per lane – Channel loss budgets 30 dB@13.28 GHz. Link Segment up to at least 3 m reach 17.6 dB@13.28 GHz.
- 802.3ck 100GBASE-CR1, 200GBASE-CR2, and 400GBASE-CR4 PAM4 53.125 GBd per lane Channel loss budgets 28.5 dB@26.56 GHz. Link Segment up to at least 3 m reach 19.75 dB@26.56 GHz

# **Background –TP0-TP5 Channel**

Test points	Description			
TP0 to TP5	The 100GBASE-CR4 channel including the transmitter and receiver differential controlled impedance printed circuit board insertion loss and the cable assembly insertion loss.			
TP1 to TP4	All cable assembly measurements are to be made between TP1 and TP4 as illustrated in Figure 92–2. The cable assembly test fixture of Figure 92–17 or its equivalent, is required for measuring the cable assembly specifications in 92.10 at TP1 and TP4.			
TP0 to TP2 TP3 to TP5	A mated connector pair has been included in both the transmitter and receiver specifications defined in 92.8.3 and 92.8.4. The recommended maximum insertion loss from TP0 to TP2 or TP3 to TP5 including the test fixture is specified in 92.8.3.6.			
TP2	Unless specified otherwise, all transmitter measurements defined in Table 92–6 are made at TP2 utilizing the test fixture specified in 92.11.1.			
TP3	Unless specified otherwise, all receiver measurements and tests defined in 92.8.4 are made at TP3 utilizing the test fixture specified in 92.11.1.			

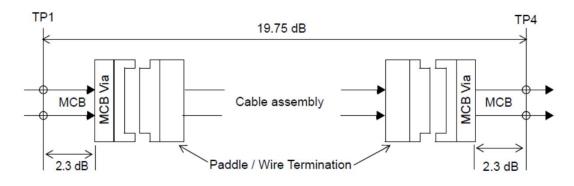

Channel IL = 28.5 dB @ 26.56 GHz = 2\*(6.875+1.6)+11.55

NOTE—Channel IL derived from cable assembly host, and mated test fixture

Channel insertion loss at 26.56 GHz

# **Background –TP1-TP4 Cable Assemblies**

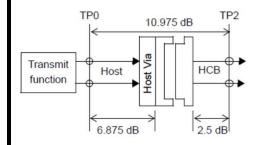

Test points	Description			
TP0 to TP5	The 100GBASE-CR4 channel including the transmitter and receiver differential controlled impedance printed circuit board insertion loss and the cable assembly insertion loss.			
TP1 to TP4	All cable assembly measurements are to be made between TP1 and TP4 as illustrated in Figure 92–2. The cable assembly test fixture of Figure 92–17 or its equivalent, is required for measuring the cable assembly specifications in 92.10 at TP1 and TP4.			
TP0 to TP2 TP3 to TP5	A mated connector pair has been included in both the transmitter and receiver specifications defined in 92.8.3 and 92.8.4. The recommended maximum insertion loss from TP0 to TP2 or TP3 to TP5 including the test fixture is specified in 92.8.3.6.			
TP2	Unless specified otherwise, all transmitter measurements defined in Table 92–6 are made at TP2 utilizing the test fixture specified in 92.11.1.			
TP3	Unless specified otherwise, all receiver measurements and tests defined in 92.8.4 are made at TP3 utilizing the test fixture specified in 92.11.1.			

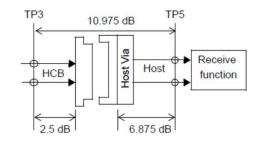

Cable assembly insertion loss at 26.56 GHz

# **Background –TP0-TP2 or TP3-TP5 Host**

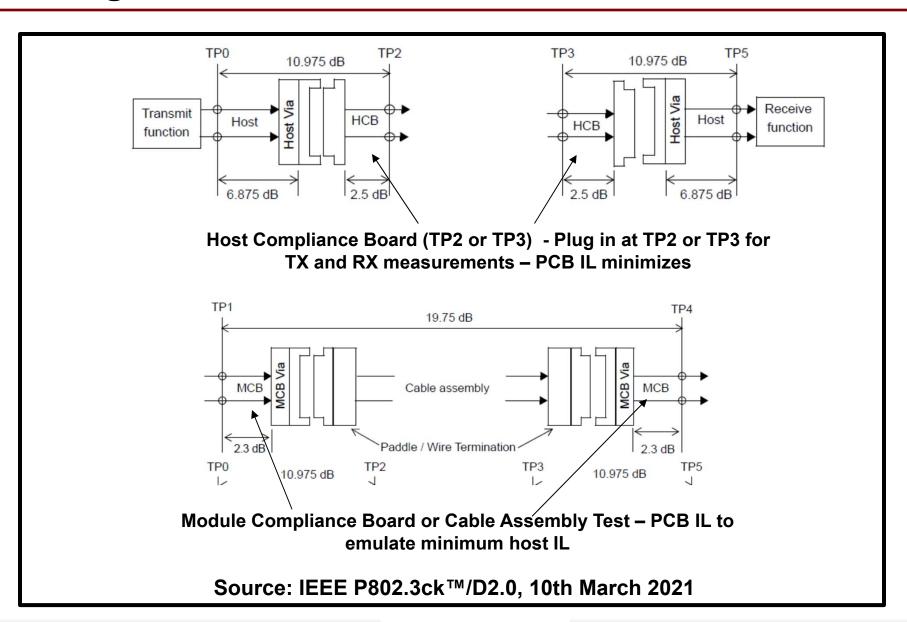

Test points	Description		
TP0 to TP5	The 100GBASE-CR4 channel including the transmitter and receiver differential controlled impedance printed circuit board insertion loss and the cable assembly insertion loss.		
TP1 to TP4	All cable assembly measurements are to be made between TP1 and TP4 as illustrated in Figure 92–2. The cable assembly test fixture of Figure 92–17 or its equivalent, is required for measuring the cable assembly specifications in 92.10 at TP1 and TP4.		
TP0 to TP2 TP3 to TP5	A mated connector pair has been included in both the transmitter and receiver specifications defined in 92.8.3 and 92.8.4. The recommended maximum insertion loss from TP0 to TP2 or TP3 to TP5 including the test fixture is specified in 92.8.3.6.		
TP2	Unless specified otherwise, all transmitter measurements defined in Table 92–6 are made at TP2 utilizing the test fixture specified in 92.11.1.		
TP3	Unless specified otherwise, all receiver measurements and tests defined in 92.8.4 are made at TP3 utilizing the test fixture specified in 92.11.1.		

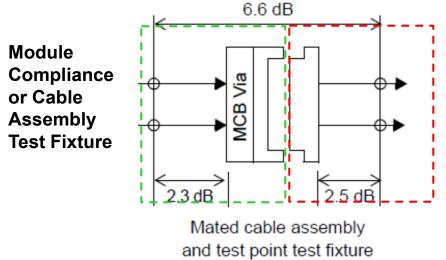

Host insertion loss at 26.56 GHz

## **Background –Test Fixtures**

## **Background –Test Fixtures**

### Specified in a mated state

NOTE—2.3 dB MCB PCB IL includes the RF connector (up to the RF connector reference plane).

Test Fixture insertion loss at 26.56 GHz

Host Compliance Board (TP2 or TP3

#### **Mated Test Fixture Parameter description**

Maximum insertion loss

Minimum insertion loss

Effective Return Loss (ERL)

Common-mode conversion insertion loss

Common-mode return loss

Common-mode to differential – mode return loss

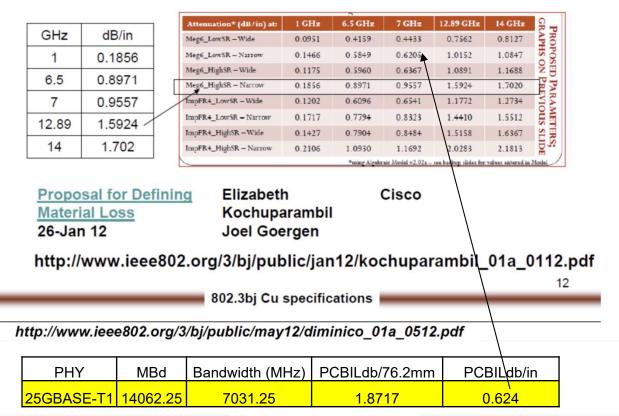

Integrated Crosstalk Noise (ICN)

### TX and RX PCB Loss

# **Dk Df Algebraic Model**

# Background

- Model first shown in Kochuparambil\_01\_1111
  - Filling a gap allows us to talk the same "language"
  - Great for initial channel loss discussions!
- Model is made public: <a href="http://www.ieee802.org/3/bj/public/tools.html">http://www.ieee802.org/3/bj/public/tools.html</a>
- No secret sauce
  - All equations used in the model are given in reference document
  - Also in public Tools folder; link above

### Tx Function to Rx function channel IL

### Tx Function to Rx function channel IL proposal

$$IL_{Channel} \le 2 \cdot IL_{PCB(76.2mm)} + 2 \cdot IL_{MDI} + IL_{Linksegment}$$
 (dB)

$$IL_{PCB(76.2mm)} \le \left(0.0071 \cdot \sqrt{f/2.5 \cdot 10^{3}} + 0.0045 \cdot f/2.5 \cdot 10^{3}\right) \cdot 76.2 \text{ (dB)}$$

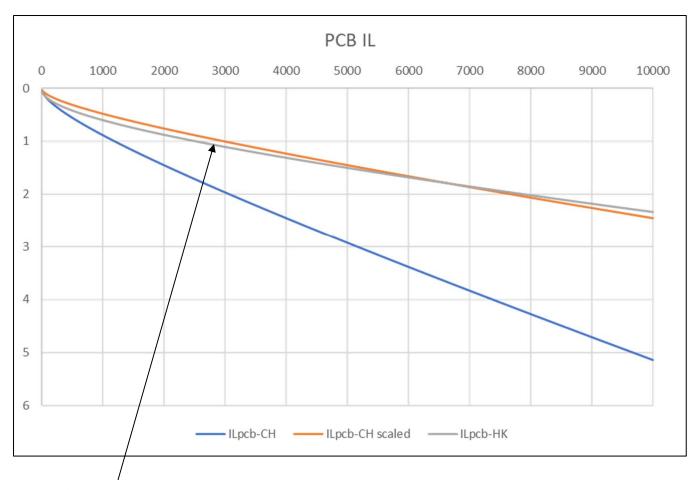

$$IL_{Linksegment} \le 0.002 \left(\frac{f}{2.5}\right) + 0.68 \left(\frac{f}{2.5}\right)^{0.45} (dB)$$

$$IL_{MDI} \le 0.1 \sqrt{\frac{f}{2.5 \cdot 10^{\circ} 3}} \quad (dB)$$
