

Evolution of Services Over Passive Optical Networks

David Levi COO March 2001

Agenda

- Objective
- Insight into APON
- Alternative solution for multi service provisioning over PON
- The msPON framing
- Summary

Objective

- New metro solution are Ethernet / IP based or SONET and not on ATM.
- Reduce maintenance and configuration costs.
- Reduce overhead.
- Minimizing cost of C.O based multiservice by using Ethernet based C.O switches solution.
- Define new cost optimize Ethernet based framing mechanism for last mile
- Must support legacy services for today network
- Provide migration for all Ethernet IP based services

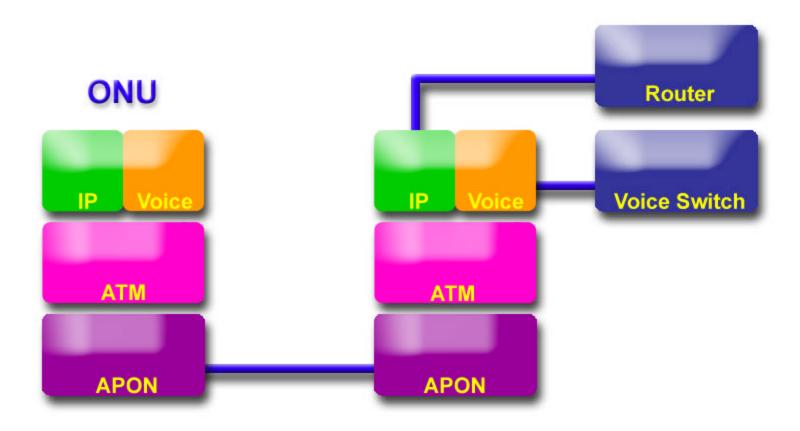

- New metro solution are IP based or SONET and not on ATM.
- Ethernet and IP based system reduce maintenance and configuration costs.
- Reduce overhead.

Voice+IP Transport APON

Multi Service APON Solution

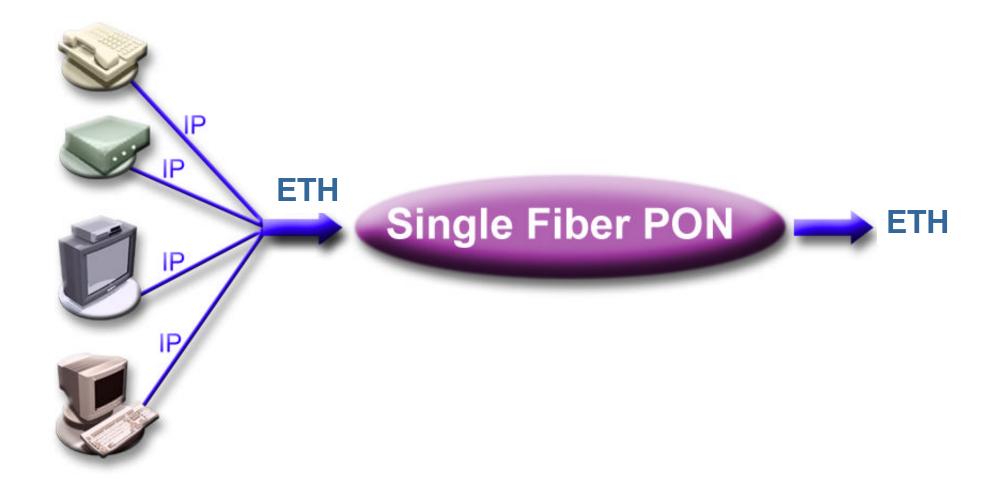

Integrated (convergent) Services in the Latter Days

The Services Today

Unfortunately.....
Most devices do not emit IP packets.

Alternative architectures for Multi-service Provisioning

ETH ETH Voice Voice **ATM ATM**

OLT system architecture – Ethernet switch

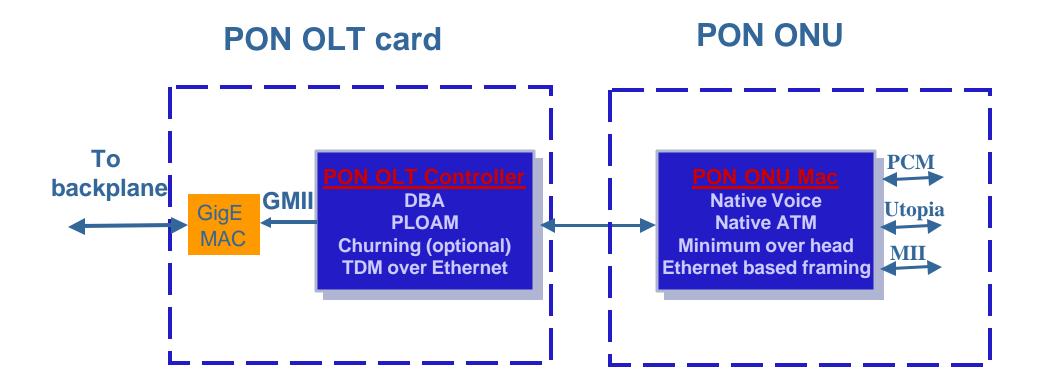

Multi service Ethernet PON solution

The msPON framing

- Ethernet centric solution
- No translation needed for legacy service at the user side
 - Reduce the CPE cost
 - Minimal maintenance
 - Minimal jitter and maximum QoS
- Maximum flexibility at the C.O
- Ethernet only solution at the C.O, using PCM over Ethernet
- Multi Service which deals with all services

Etherent+TDM+ATM over msPON

msPON offers an evolutionary solution from today's complex networks to tomorrow's all optical, multi-service IP-based network
