Abstract: This liaison responds to IEEE802.3 Ethernet WG-LS117

Q11/15 thanks the IEEE P802.3df task force for your liaison regarding the progress of 802.3df. We appreciate you sharing your latest draft so Q11 participants can fully understand the context of the note that defines the OTN mapping reference point. We confirm that this definition is aligned with the way we intend to map 800G Ethernet into OTN.

We look forward to continued collaboration between our two groups.
