# Action Items

- **Request to approve new backplane objectives for 200 GbE / 400 GbE / 800 GbE / 1.6 TbE**
  - **Task Force – approved by unanimous consent**
- **Request to approve liaison response to ITU-T SG-15**
  - **Task Force – approved by unanimous consent**

# Feasibility based on P802.3dj contributions illustrate a variety of 200 G KR configurations

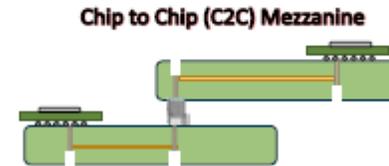

## Performance Comparison

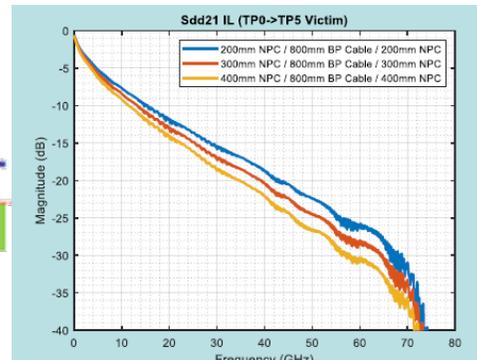

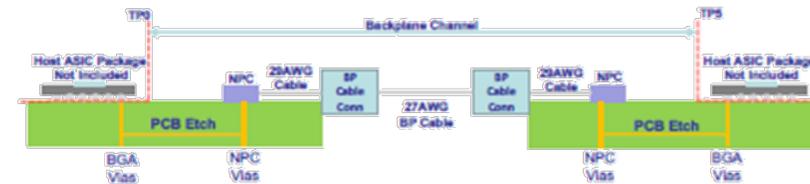

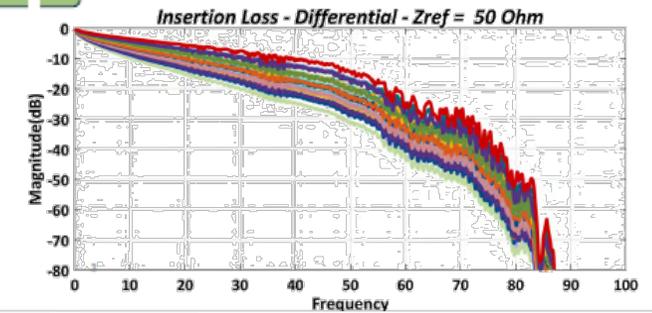

- Simulation of a typical KR cabled backplane architecture over various cable lengths
- Contributions:
  - BGA / PCB trace / NPC via escapes simulated with HFSS
  - NPC + BP cable assemblies: provided by Michael Rowlands, affiliated with Amphenol
- Ball-to-Ball topology: does not include package effects
- This presentation does NOT propose the following:
  - Specific aggregate or cable losses
  - Specific host architecture implementations

## 200 Gb/s PAM4 Channel Topologies

Length variations provide an amalgamation of products a with range of losses

IEEE P802.3dj Ethernet Task Force

- Summary of KR reaches are up to
- 1 meter for a cabled backplane
  - 300 mm of cable on a host plus a few inches for break out
    - Or between 5 to 7 inches of host PCB trace
  - Subset of KR may include
    - orthogonal box designs
    - chip to chip
- Details in References on slide 11*

# WG Motion:

- **Move to:**
- **Approve the following backplane objectives for 200GBASE-KR1, 400BASE-KR2, 800GBASE-KR4, and 1.6TBASE-KR8:**
  - Define a physical layer specification that supports 200 Gb/s operation over 1 lane over electrical backplanes supporting a die-to-die insertion loss  $\leq 40$  dB at 53.125 GHz
  - Define a physical layer specification that supports 400 Gb/s operation over 2 lanes over electrical backplanes supporting a die-to-die insertion loss  $\leq 40$  dB at 53.125 GHz
  - Define a physical layer specification that supports 800 Gb/s operation over 4 lanes over electrical backplanes supporting a die-to-die insertion loss  $\leq 40$  dB at 53.125 GHz
  - Define a physical layer specification that supports 1.6 Tb/s operation over 8 lanes over electrical backplanes supporting a die-to-die insertion loss  $\leq 40$  dB at 53.125 GHz
