To SCC20 TAD P1641.1 Working Group

Completion of IEEE ballot for P1641.1 User Guide

Dear All,

As many of you may be aware, the ballot of IEEE P1641.1 Draft 3 was successfully completed on the 27 August. The draft was approved with an 86% response rate and with 100% approval.

We now have a total of 48 comments to work through and I have already read through most of them to see the level of work involved. Many of them are straightforward editorial (English) errors such as spellings, punctuation and other similar typographical errors. A series of comments refers to the fact that we have duplicate definitions caused by over enthusiastic keyword checking and all of the glossary terms being included in the definitions clause. The remaining comments refer to things such as errors in examples which are straightforward to resolve.

We fully expect to have all these issues fixed well in time for the October submission date for RevCom, which will hopefully lead to approval in December.

Yours sincerely

Ashley Hulme
