

# General Fusion

Technical Tour

Thursday, March 14, 2024

Fusion energy promises to fundamentally transform the energy landscape as we know it. General Fusion's mission is to pursue the fastest, most practical path to bringing fusion energy to market using its MTF technology.

The company's approach enables it to unlock significant milestones in the near term while effectively reducing the technical leap between its next near commercial machine and a fully operational commercial pilot plant. This approach brings the company closer to its ultimate goal of providing clean and sustainable fusion power to the world.
