

**IEEE/PES Transformers Committee  
Fall 2010 Meeting  
Toronto, Ontario CANADA**

**“Panel Q&A Session”**

**-- Technical Presentation --  
Tuesday, October 26, 2010**

**By Various Industry Experts (to be determined)**

**Description of Session**

A panel of experts will be assembled to answer questions on some of the evolving issues in our industry. The participants will be drawn equally from end-users, manufacturers, academics, and general interest. They will respond to the questions during the session. The goal of this session is to introduce new issues, encourage the sharing of experiences, and perhaps foster new work within the Transformers Committee.

Topical questions will be solicited from attendees prior to the Toronto Meeting. Desired topics may cover a wide range but should deal with "new issues" that are not presently being addressed within our committee. Examples of the possible questions are: "How have the DOE rules affected your transformers?", "What transformer design innovations are you presently using?", "What are you doing as a result of furan testing?", etc.

**How This Will Work**

Over the next several days, we will solicit questions from those individuals registered for the Toronto Meeting. The questions will be reviewed and arranged by subcommittee. We will use the questions to solicit panel members from each subcommittee. Each of the questions submitted will be discussed by the panel in advance and will be addressed by panel members during the presentation. Time will be allowed for additional responses from experienced members of the audience ("open mic" time).

Email your questions now to the session facilitator, James Gardner at [jmgardner@ieee.org](mailto:jmgardner@ieee.org).

Submit your questions now, come to the session, and be prepared to learn!
